

# **CO<sub>2</sub> vrije datacenters en tuinders**

Sessie 7: Elektrificatie, technieken en flexibiliteit

**Annemarie Costeris – Microsoft & Robert Kielstra - ECW**

Microsoft will be carbon negative by 2030 and will remove all historic emissions emitted either directly or via electricity consumption by 2050

2025:  
100% renewable energy

## Sustainability Goals by 2030

Carbon  
negative

Zero Waste

Water  
positive

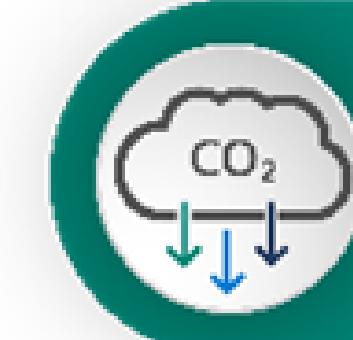

Restore more  
land than we  
use

## Carbon reporting

## Carbon reduction

## Carbon removal

Corporate carbon disclosure and procurement; GHG reporting metrics and use of new technologies to calculate and track emissions and climate impacts

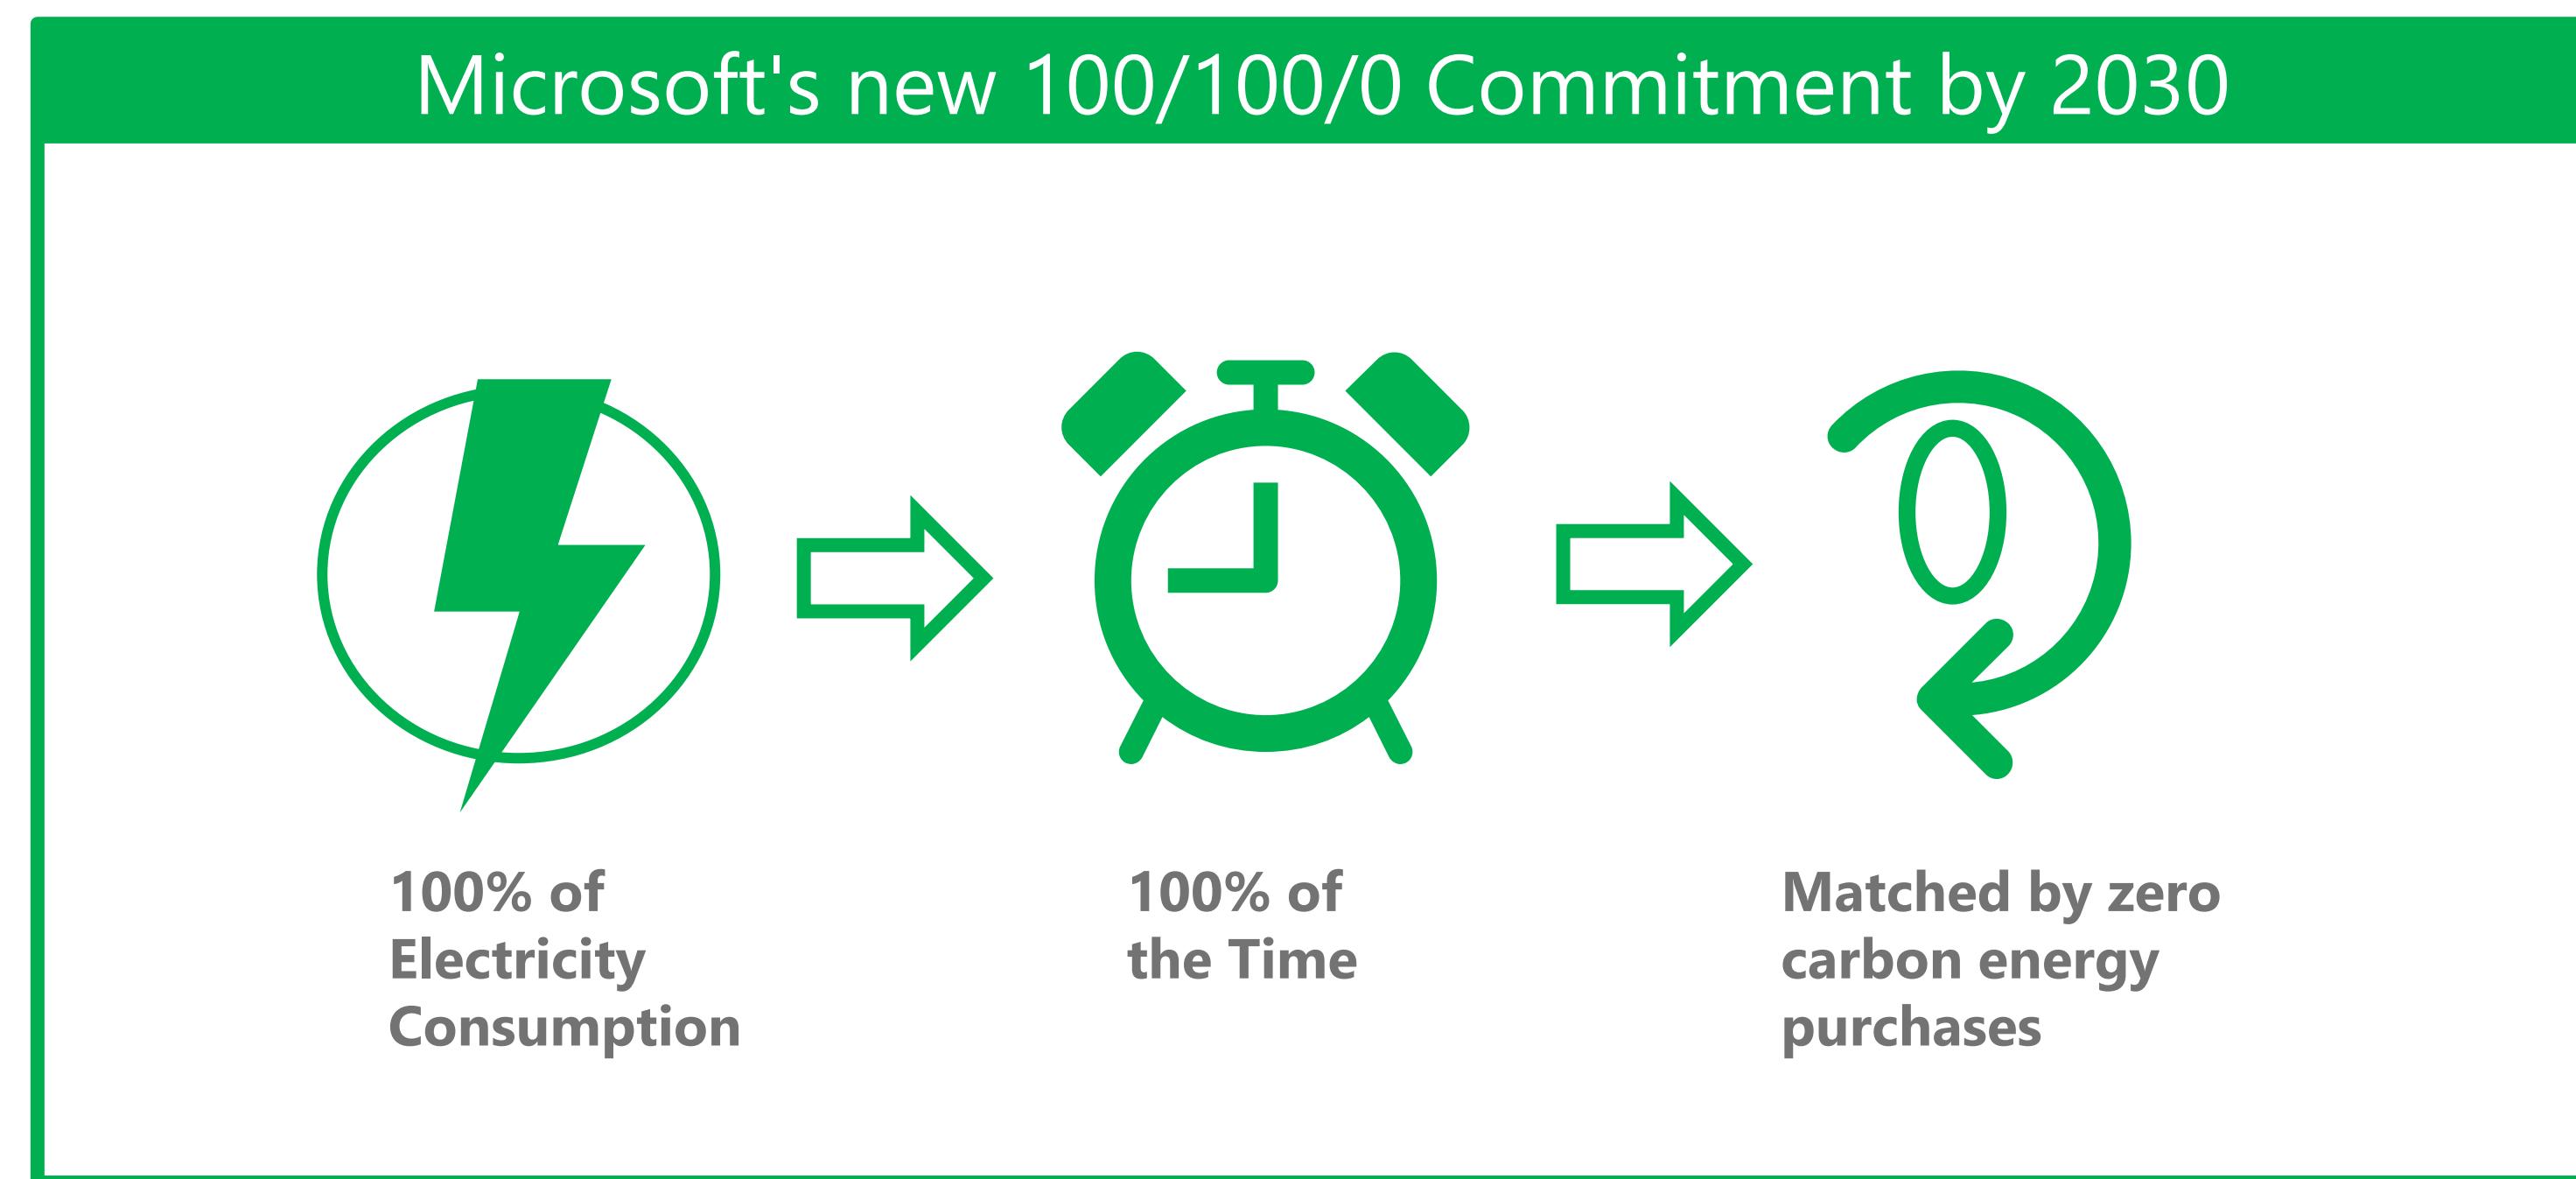

Outcome based, grid-decarbonization,  
incentivize hard to abate sectors

Clear accounting standards, durable solutions,  
engaging impacted communities.

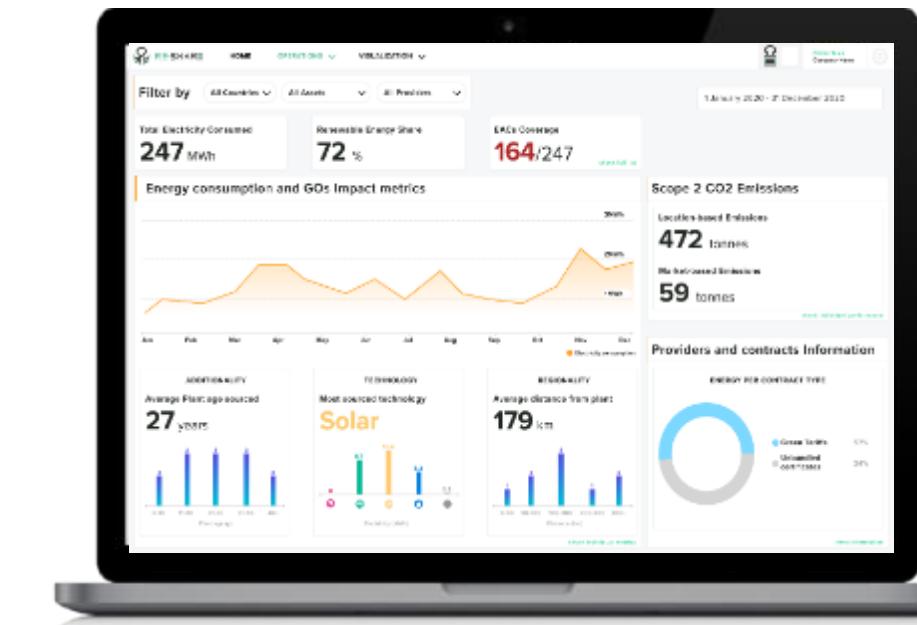

# Microsoft's 100/100/0 vision and commitment for a decarbonized grid

Stanford study: When 100% renewable energy doesn't mean zero carbon

*"In 2025, is er in Californië 50% meer hernieuwbare energie beschikbaar op jaarbasis, dan nodig is op uurbasis'*

# Multi-party hourly matching project for Microsoft's data center in Amsterdam

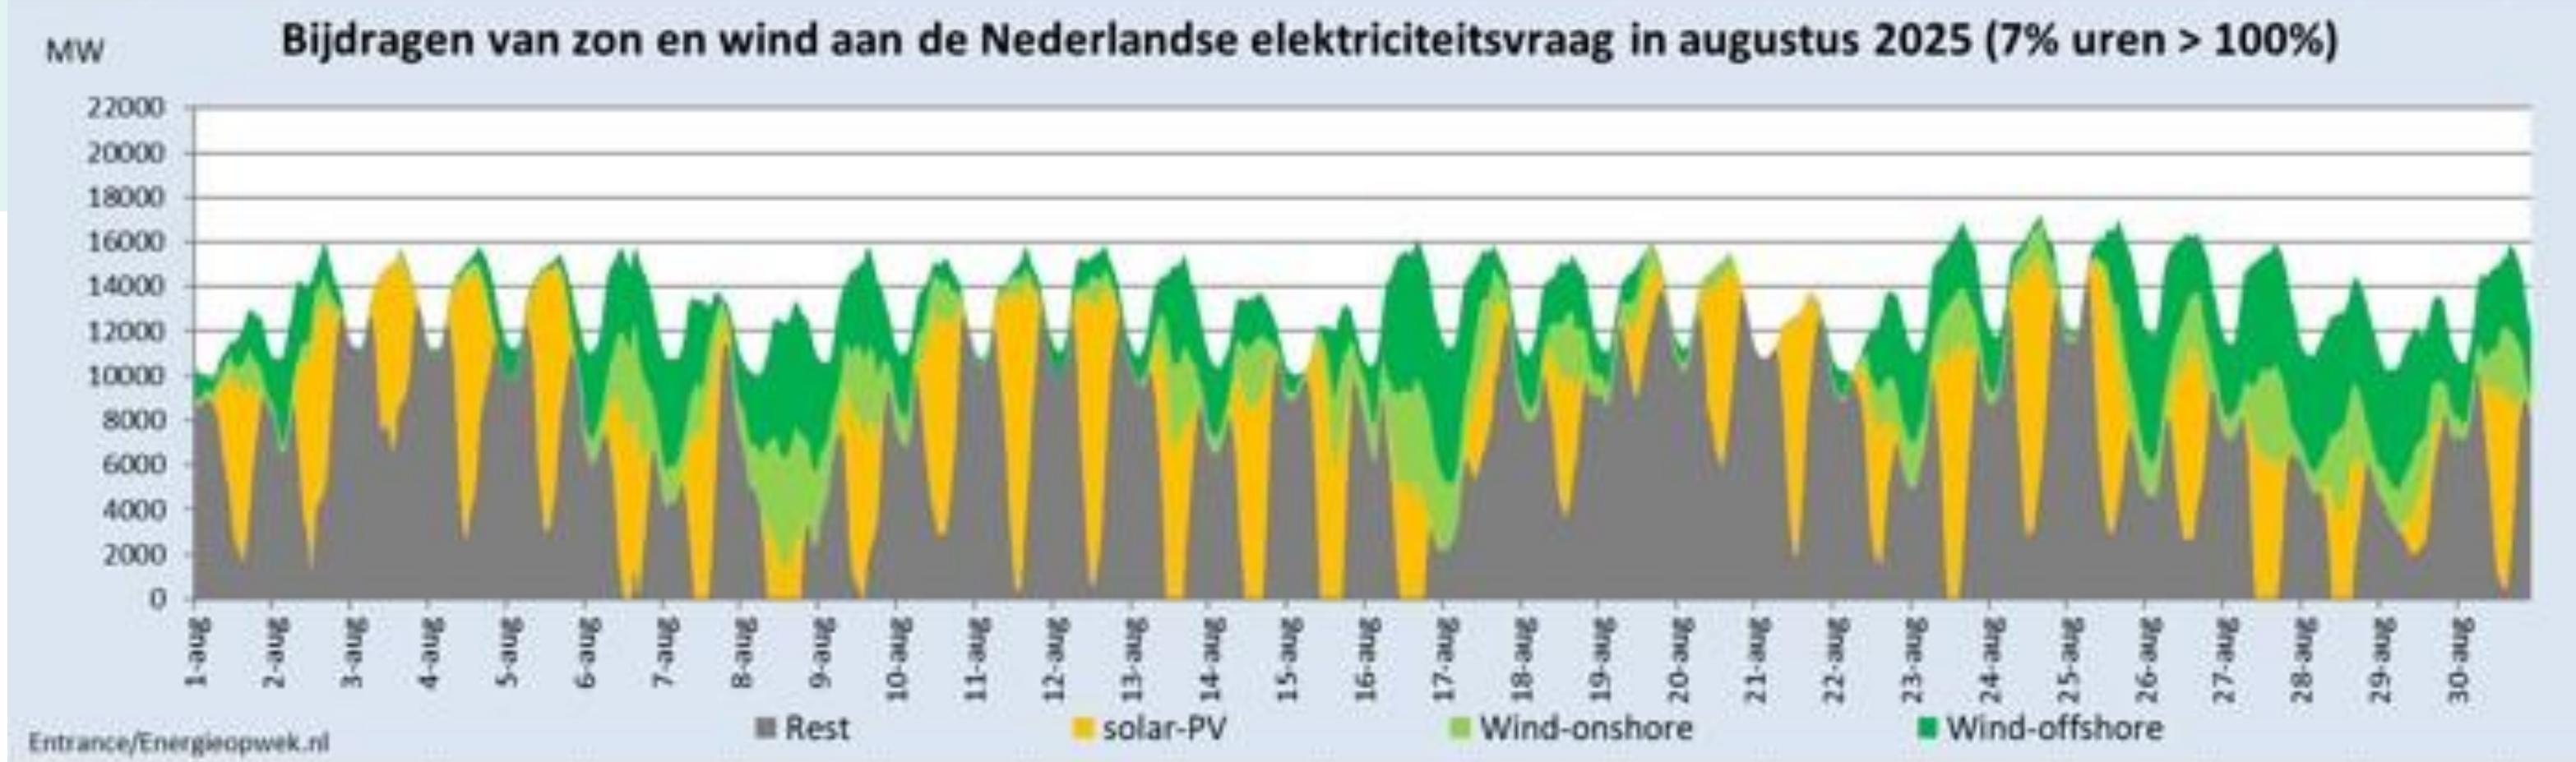

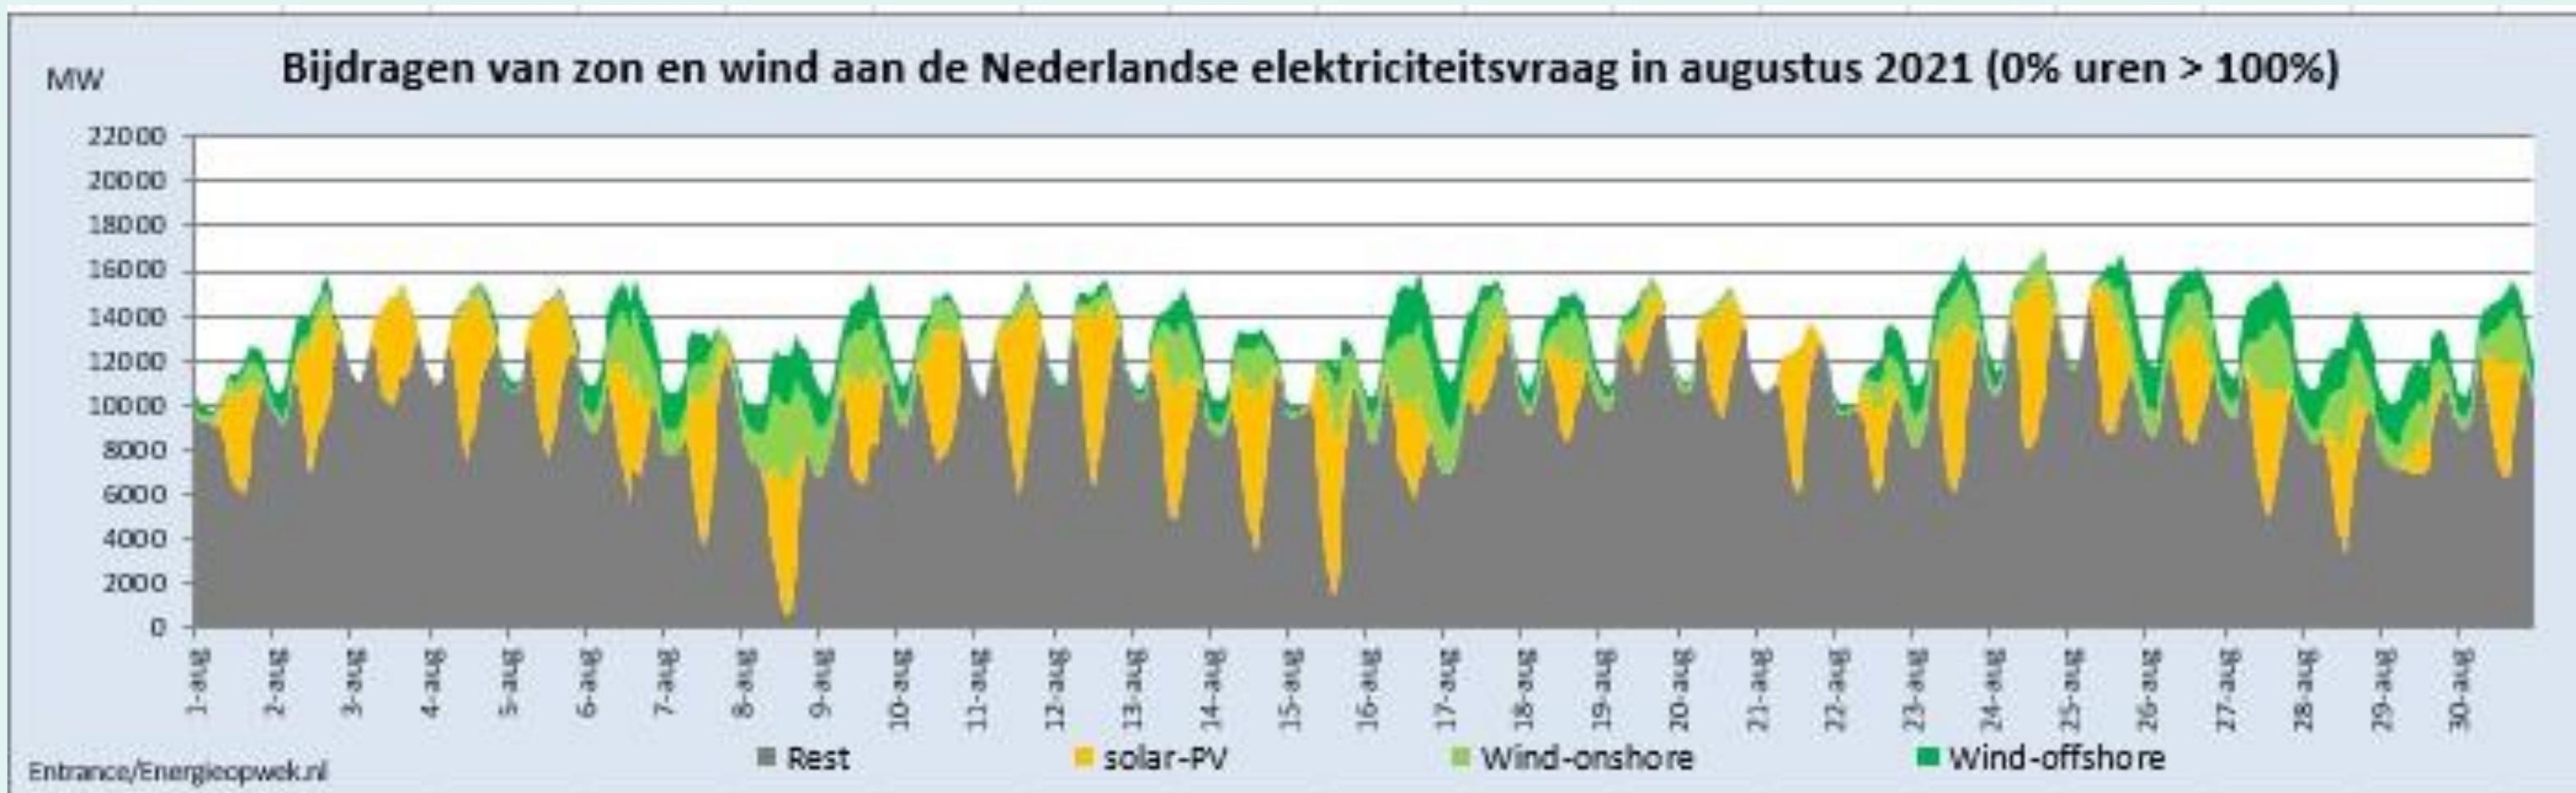

Currently Microsoft has signed a PPA contract with Eneco for renewable energy from an offshore wind farm. Microsoft has committed to a **100/100/0 goal** in order to truly eliminate emissions from the electricity they buy for its datacenters.

With CertiQ and FlexiDao parties are testing with tracking energy on an hourly basis using the Granular Certificate standard from EnergyTag.

# Demand for CO<sub>2</sub>-free Flex

Even with bad aug-mnth'21 we go to surpluses in 2025

## How to anticipate?

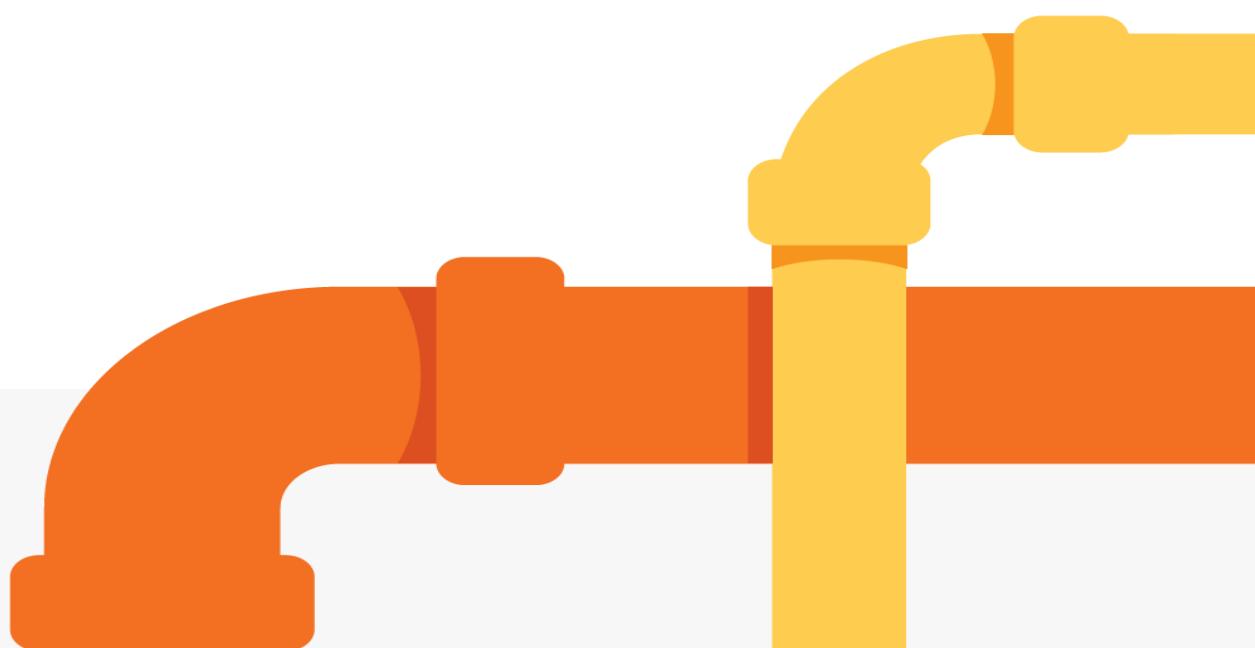

- 1) **Optimal production mix**  
e.g. contract 25% solar and 75% wind, improves matching score from ca 60% to 70%
- 2) **Demand steering**  
if possible and where economical
- 3) **Battery storage**
- 4) **CO<sub>2</sub> free Flex (e.g. H<sub>2</sub>)**

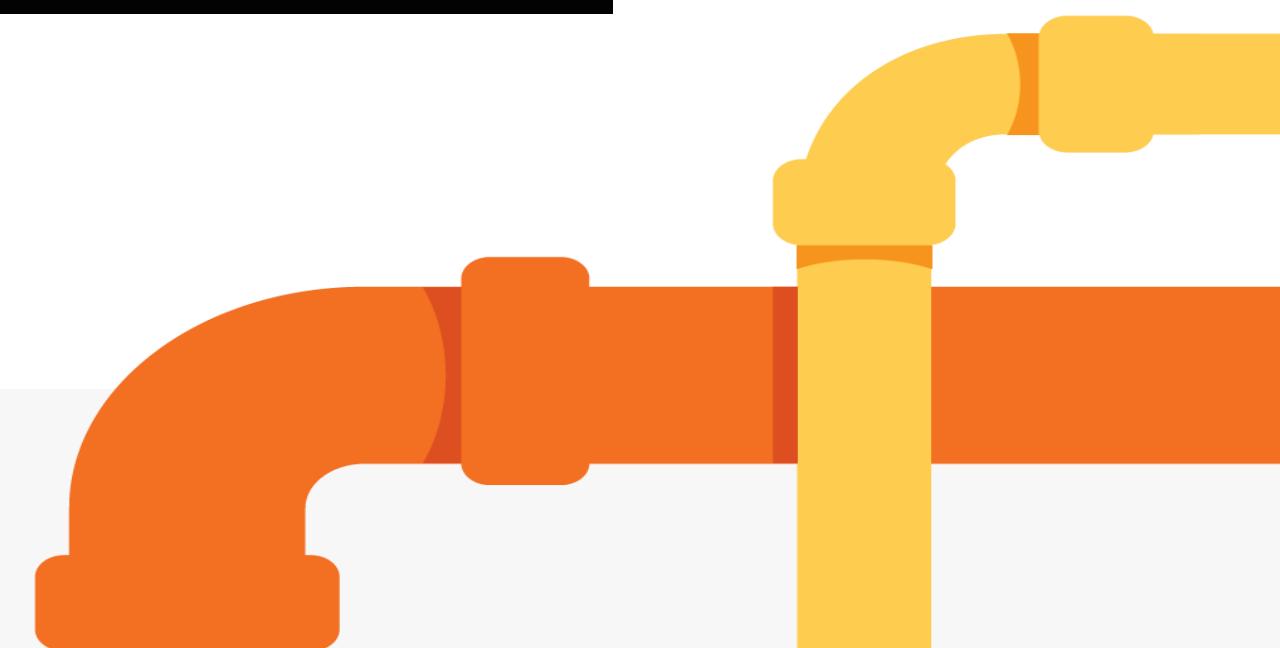

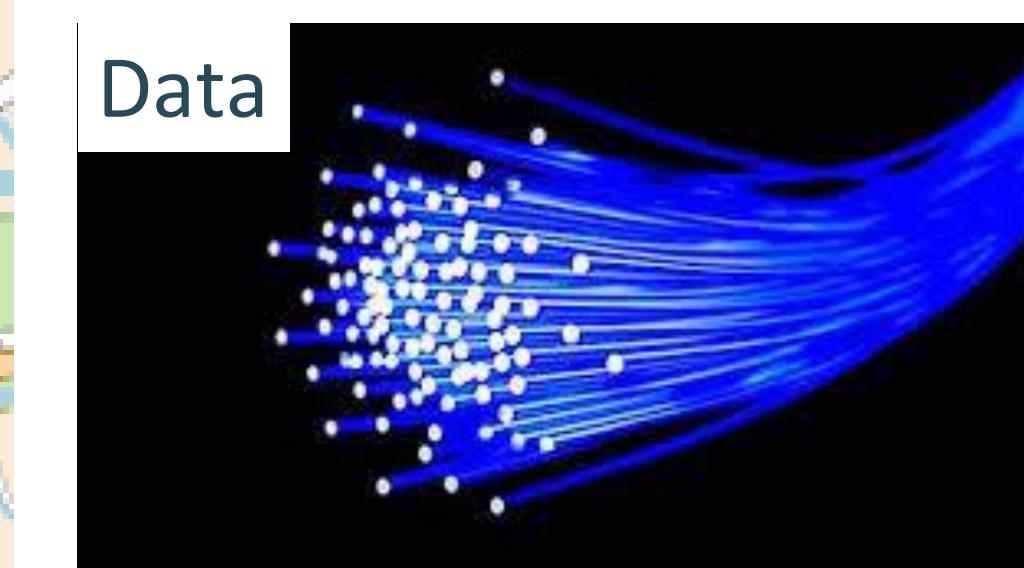

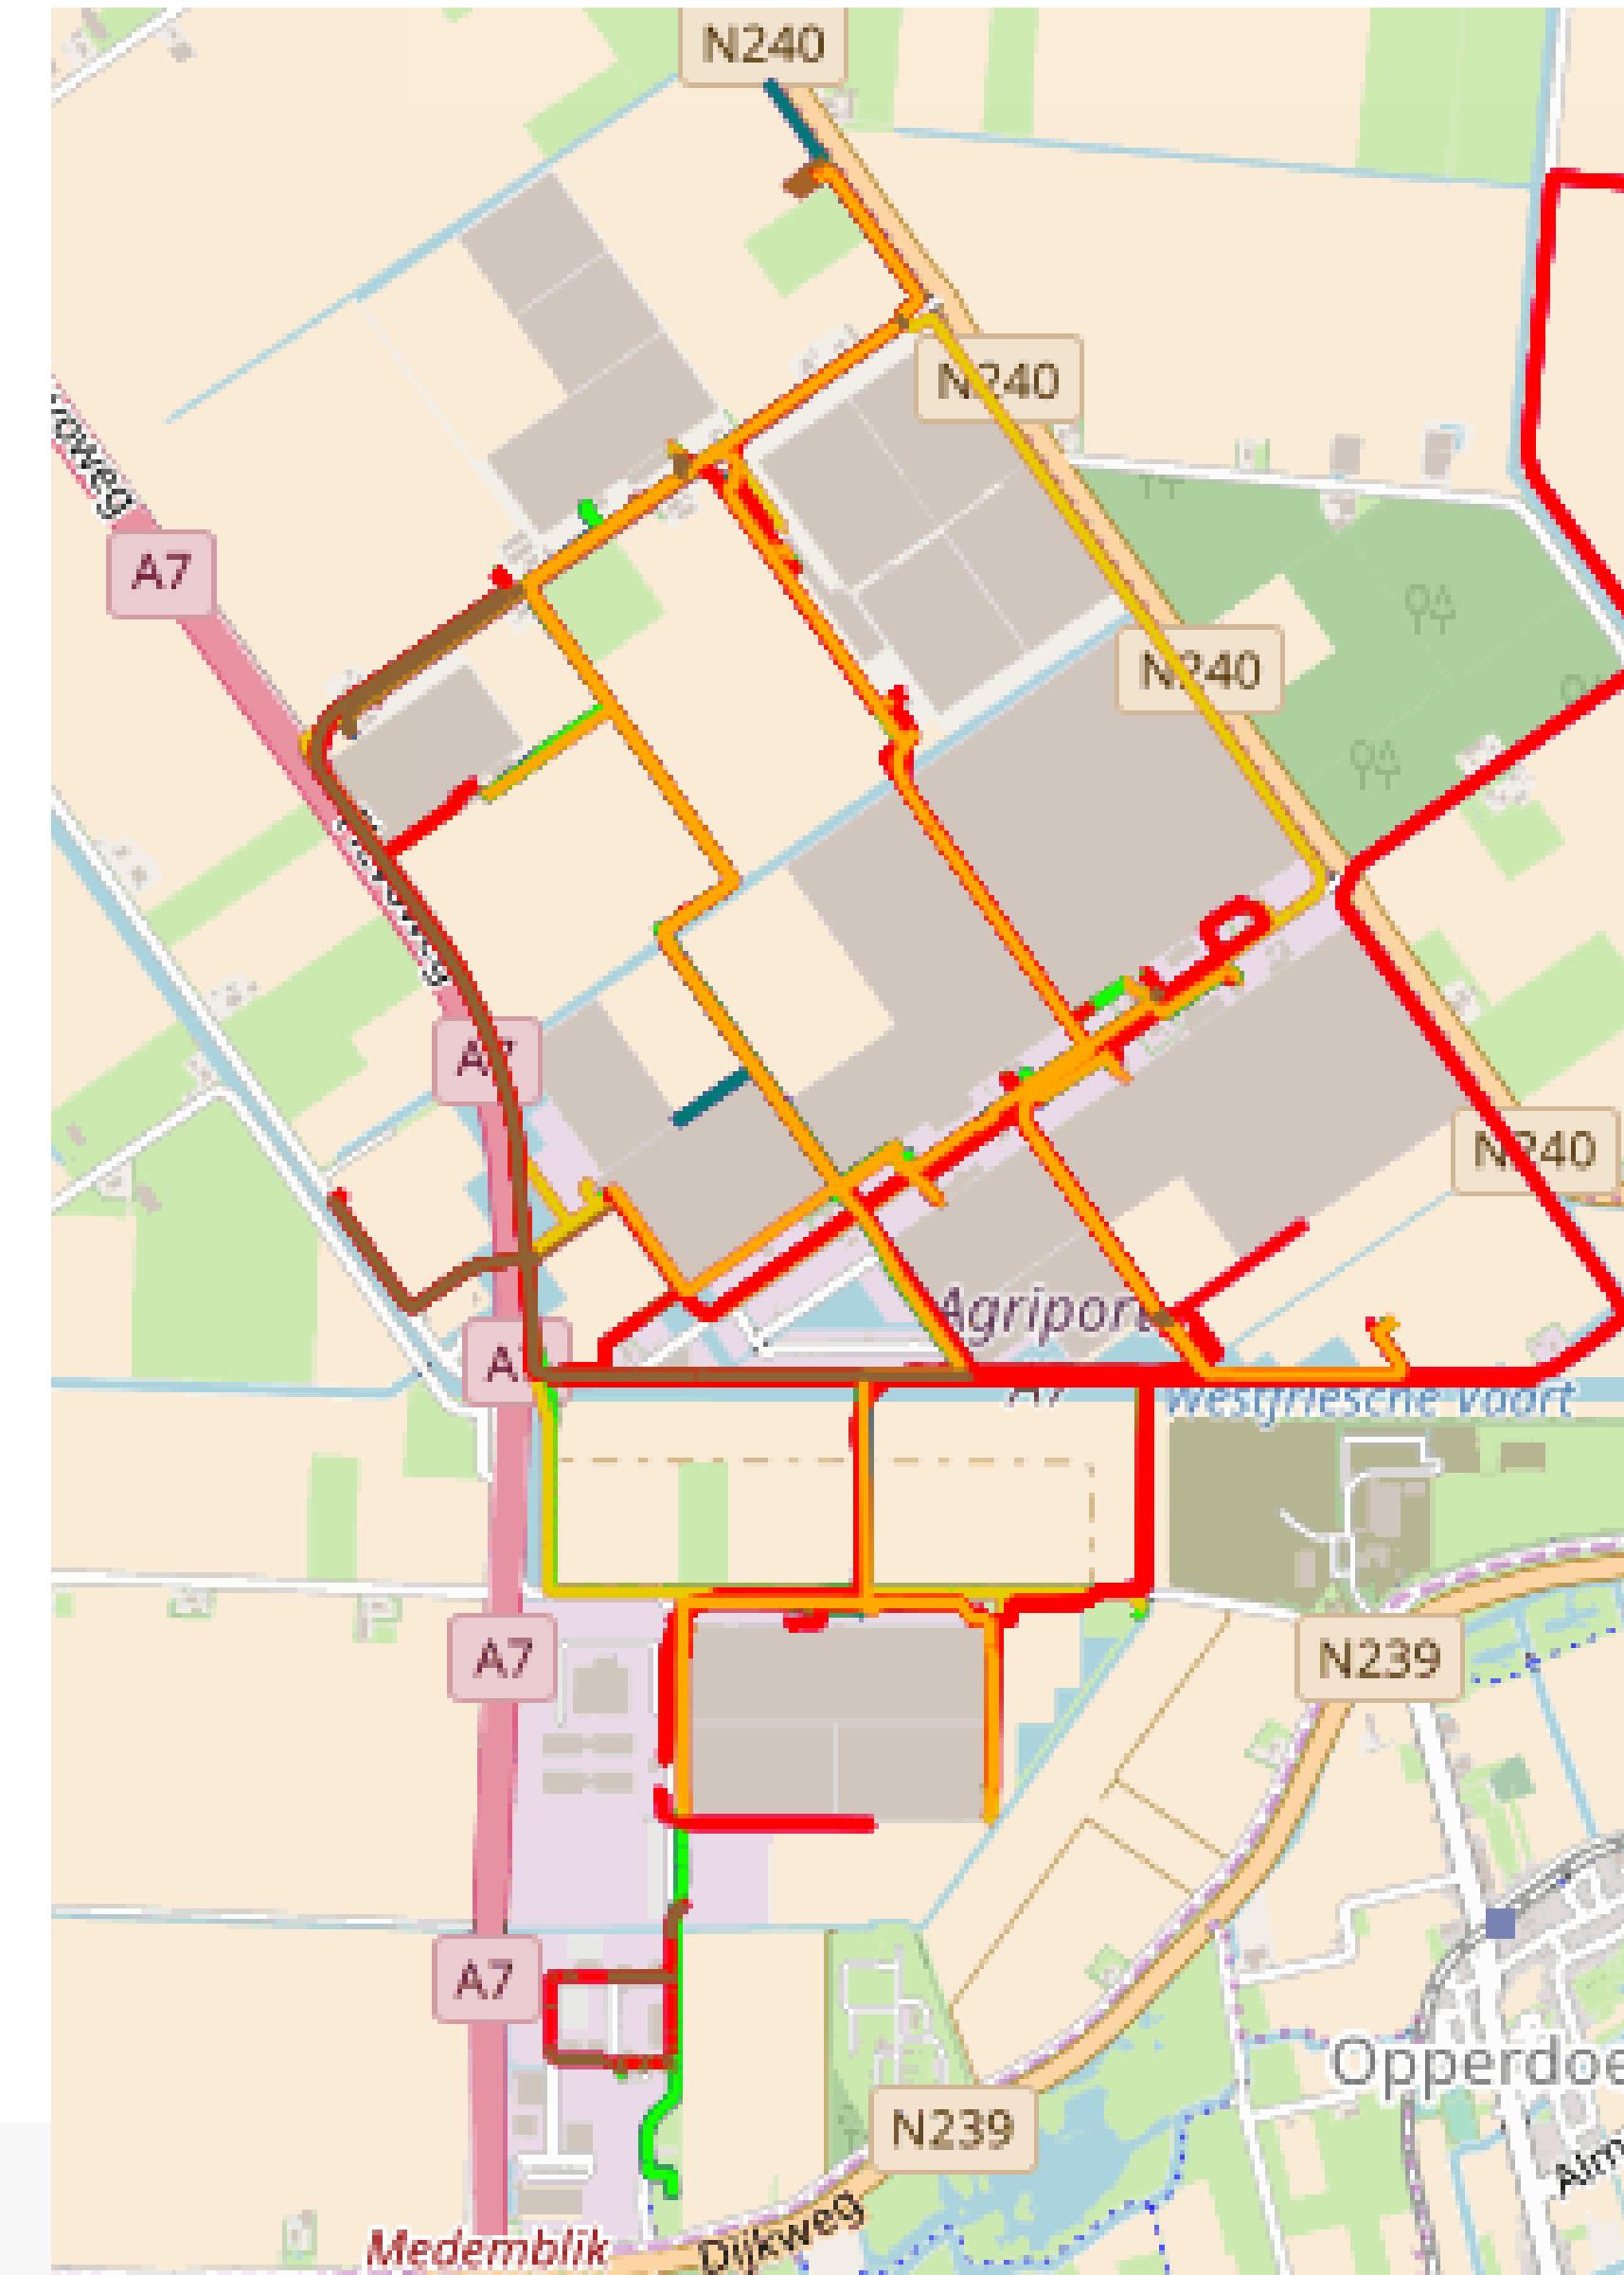

**ecw**  energy

# Agenda

1. Introductie
2. Ontwikkelingen
3. Vooruitblik

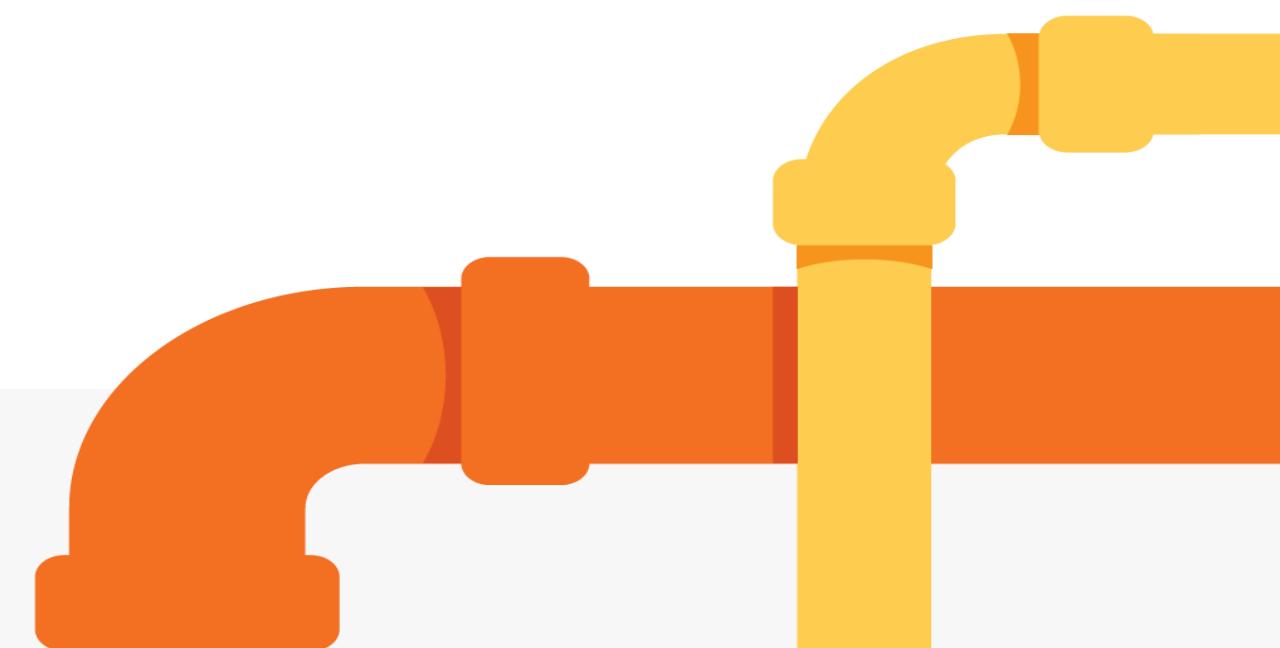

# 1. Introductie- Netwerken

# 1. Introductie ECW

| Netwerken   | Productie  | Diensten   |
|---|--|--|
| <ul style="list-style-type: none"><li>• Energie (<i>elektra, gas, warmte, CO2</i>)</li><li>• Water</li><li>• Data (Glasvezel)</li></ul> | <ul style="list-style-type: none"><li>• WKK</li><li>• Zon PV</li></ul> <p>Bij aangeslotenen:</p> <ul style="list-style-type: none"><li>• WKK</li><li>• Wind</li><li>• Zon PV</li><li>• Geothermie</li><li>• Biomassa</li></ul> | <ul style="list-style-type: none"><li>• SU+M (handelsplatform)</li><li>• Grondwater</li><li>• Noodstroom</li><li>• Meetdiensten</li><li>• Advies</li><li>• VVE</li></ul> |

## Gebiedsvisie Energie AgriportA7

Doorkijk richting 2030

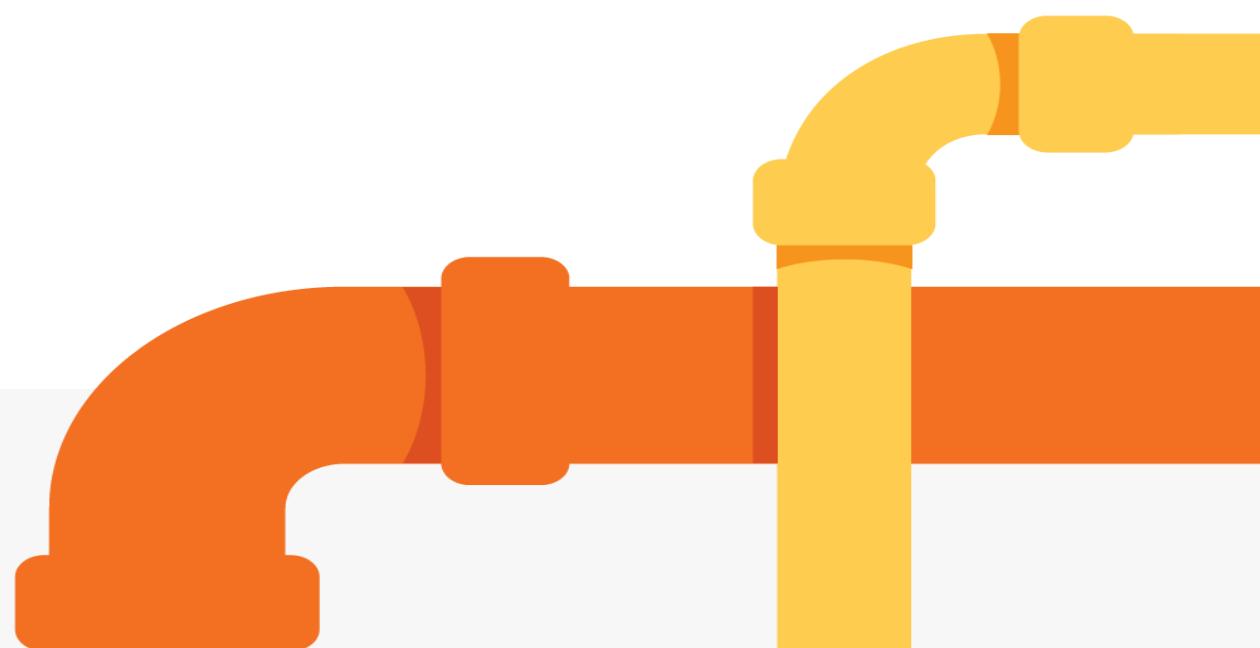

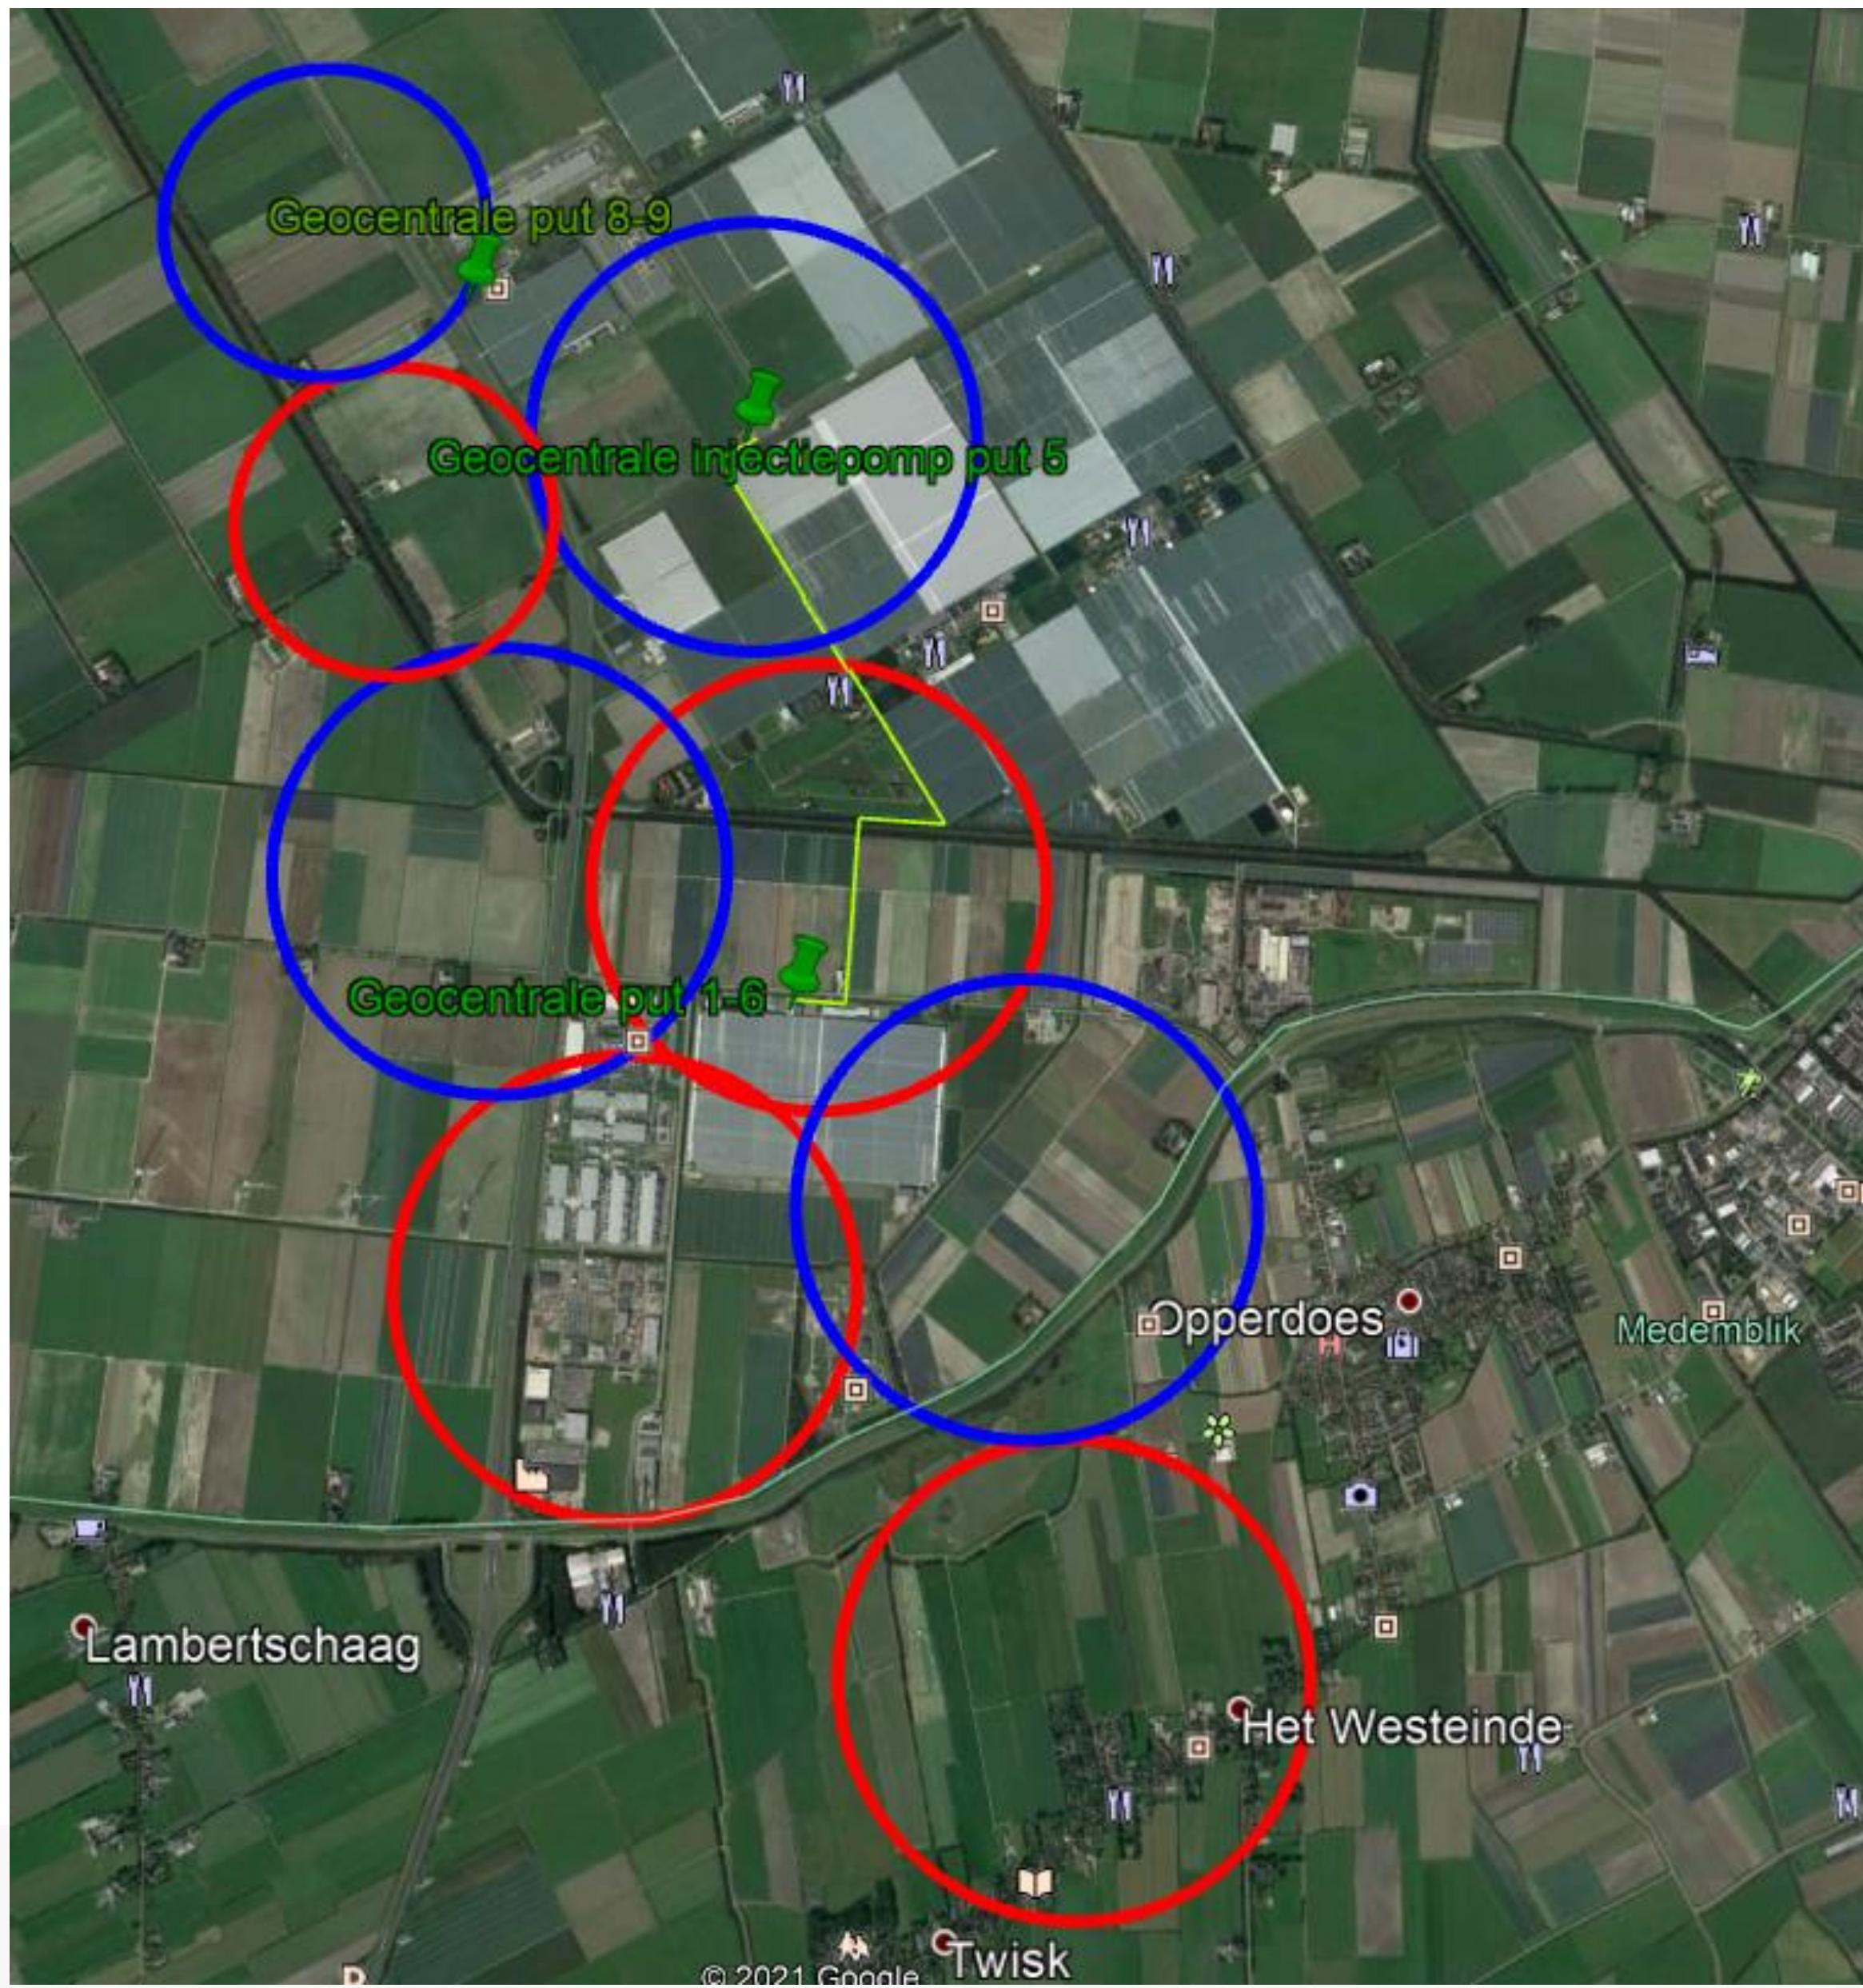

DATUM | 25-01-2023

OPDRACHTGEVER | Greenport Noord Holland Noord

STATUS | Concept

# Aardwarmte Agriport

# Aardwarmte Agriport

**ecw**  **energy**

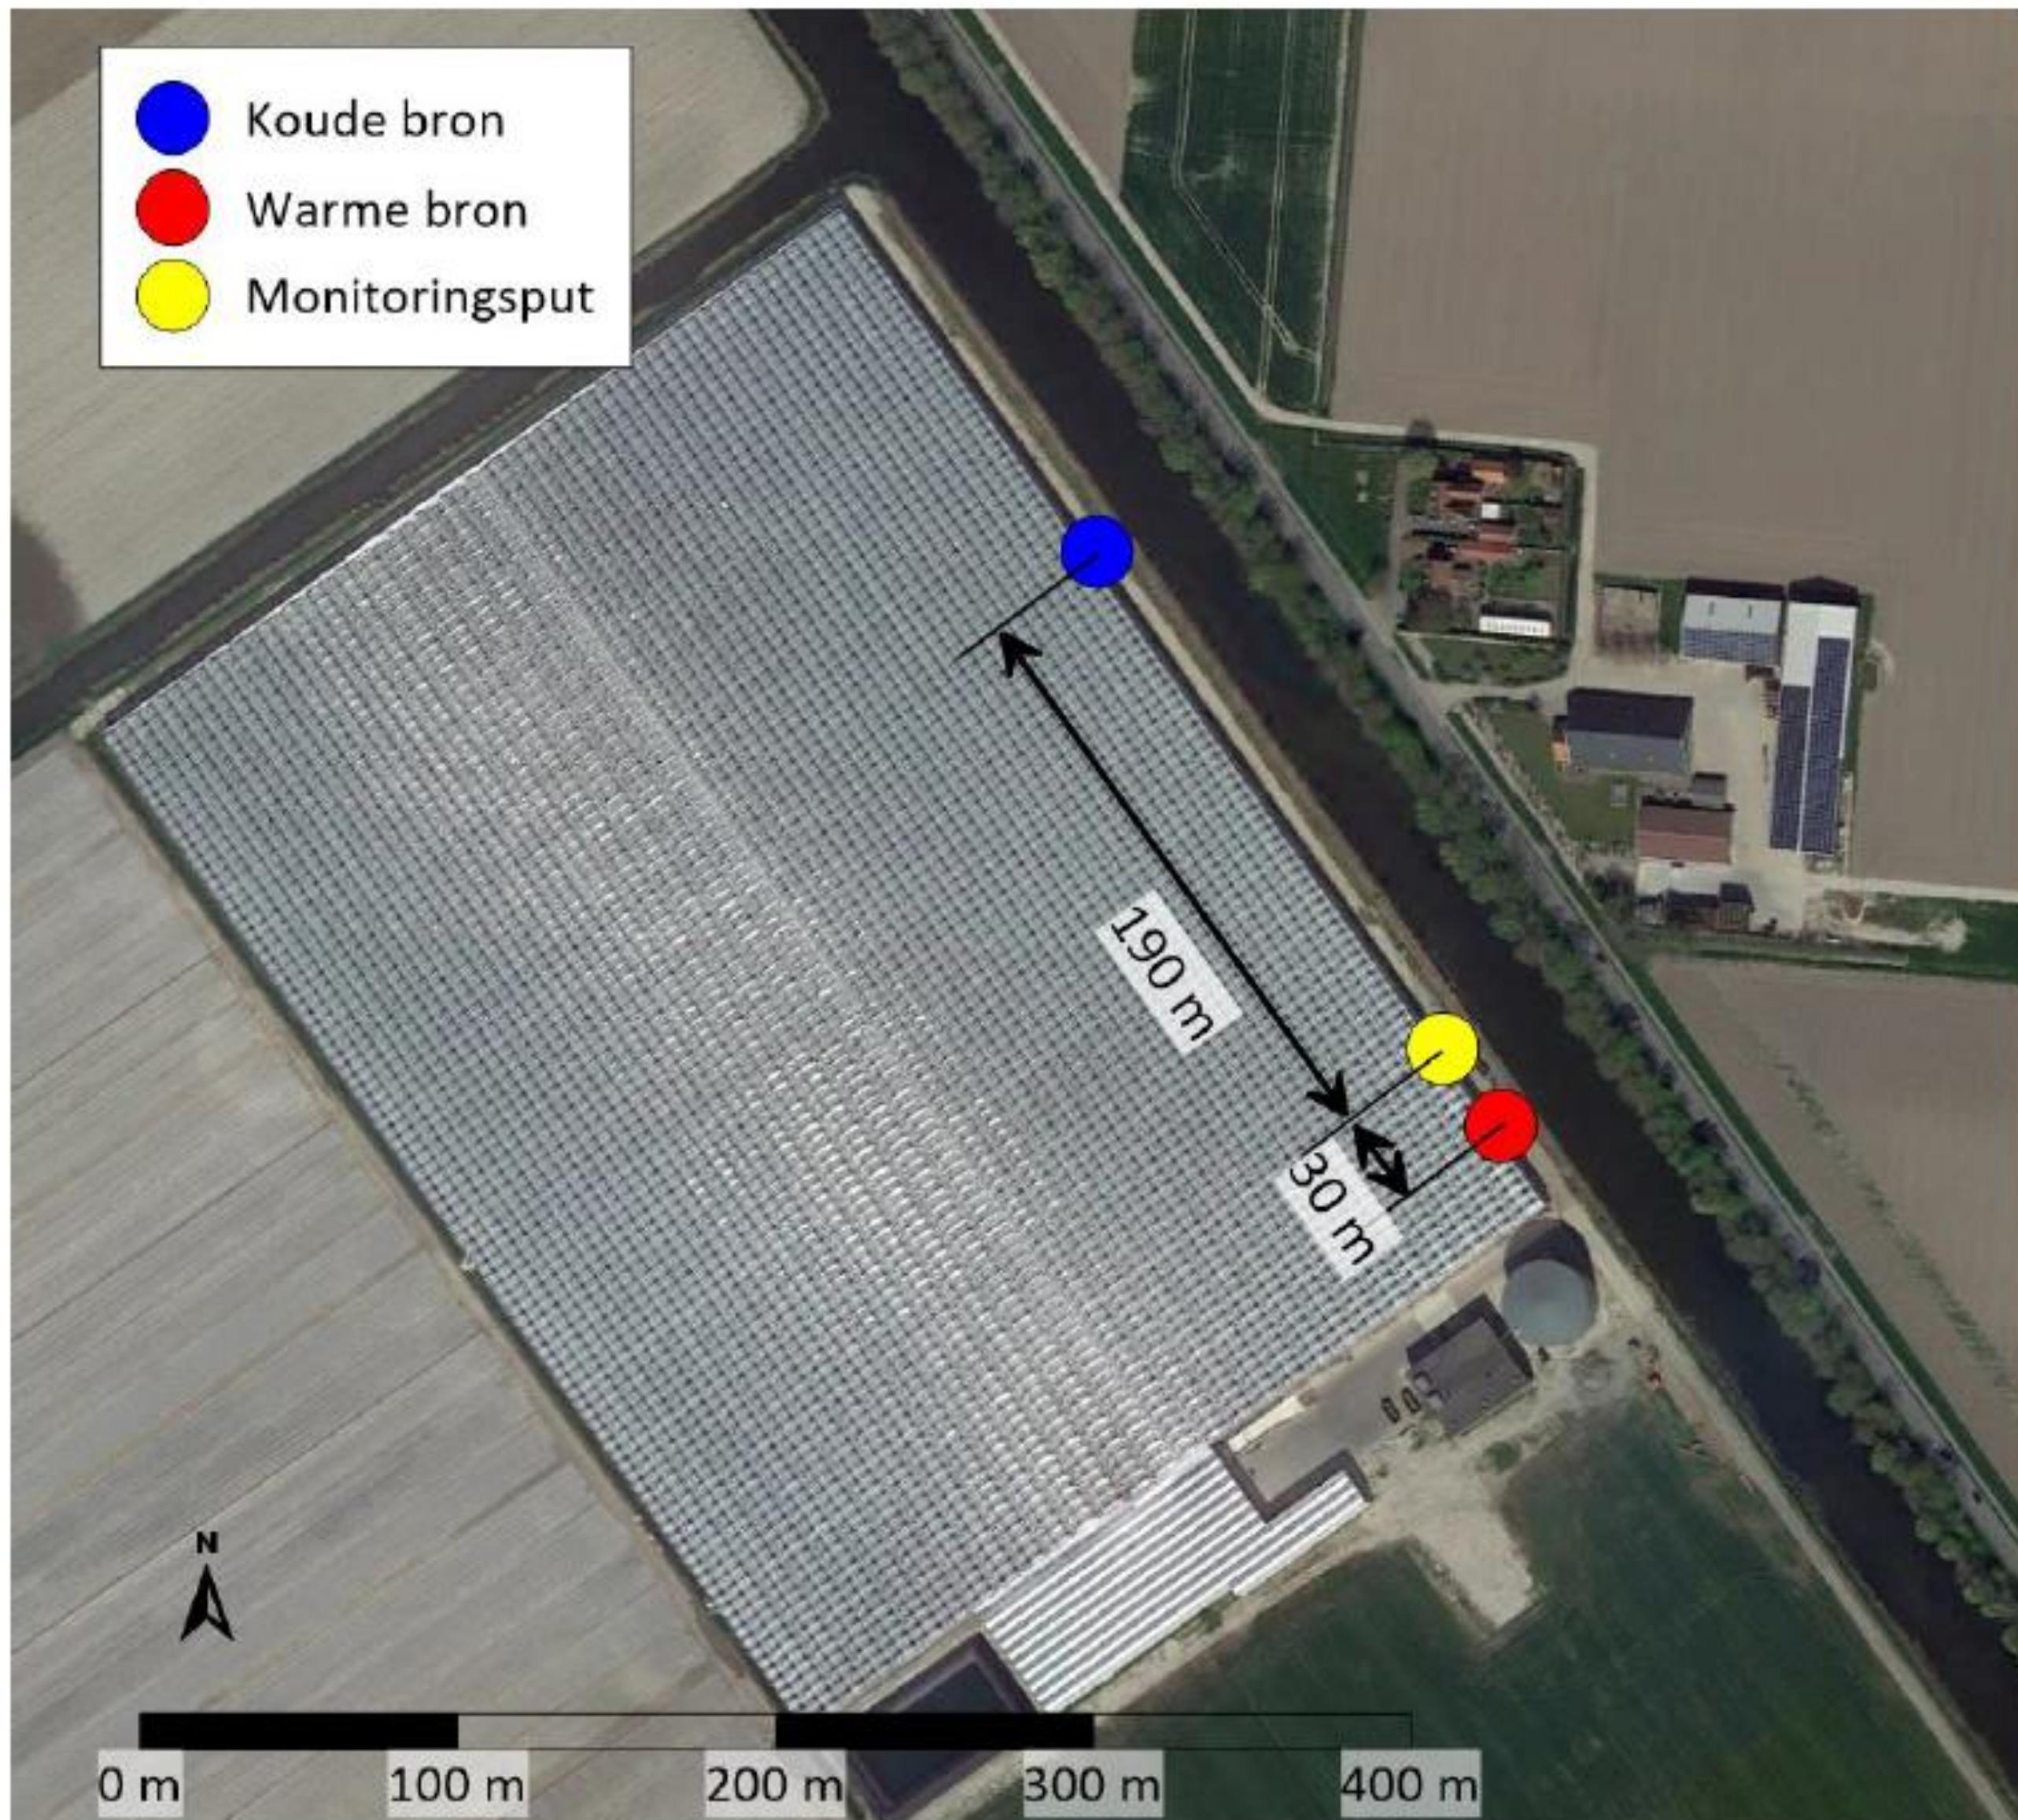

# Warmtedistributie

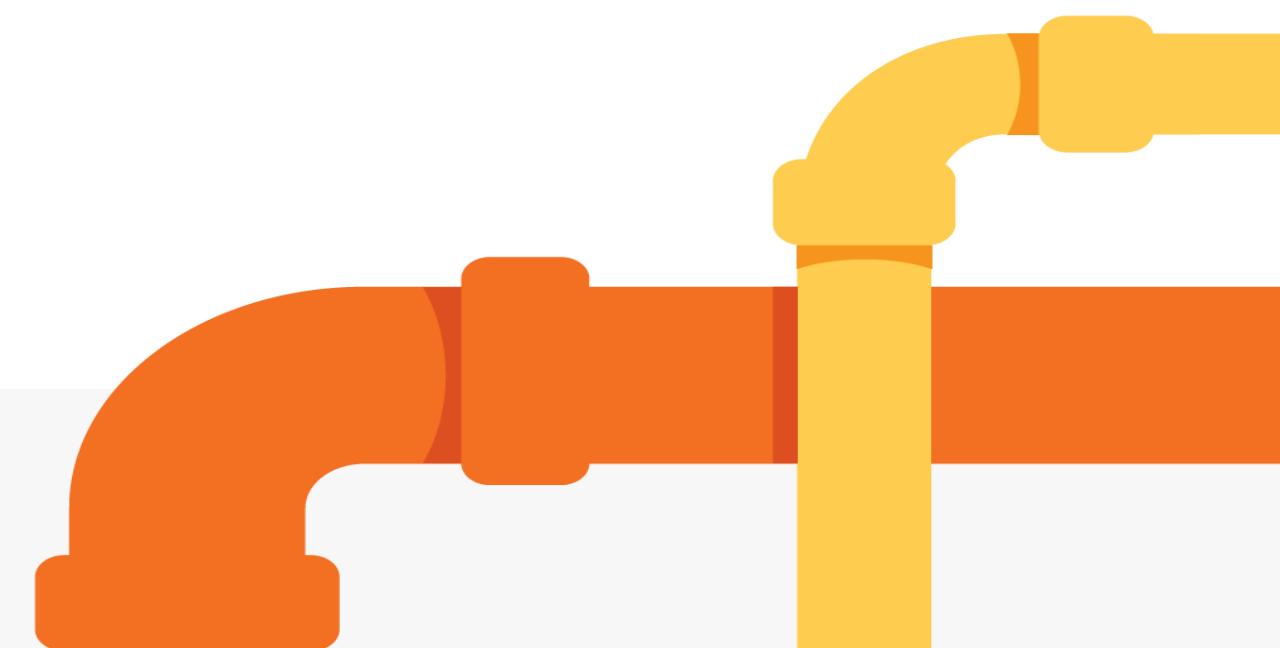

# Biomassa-energiecentrale

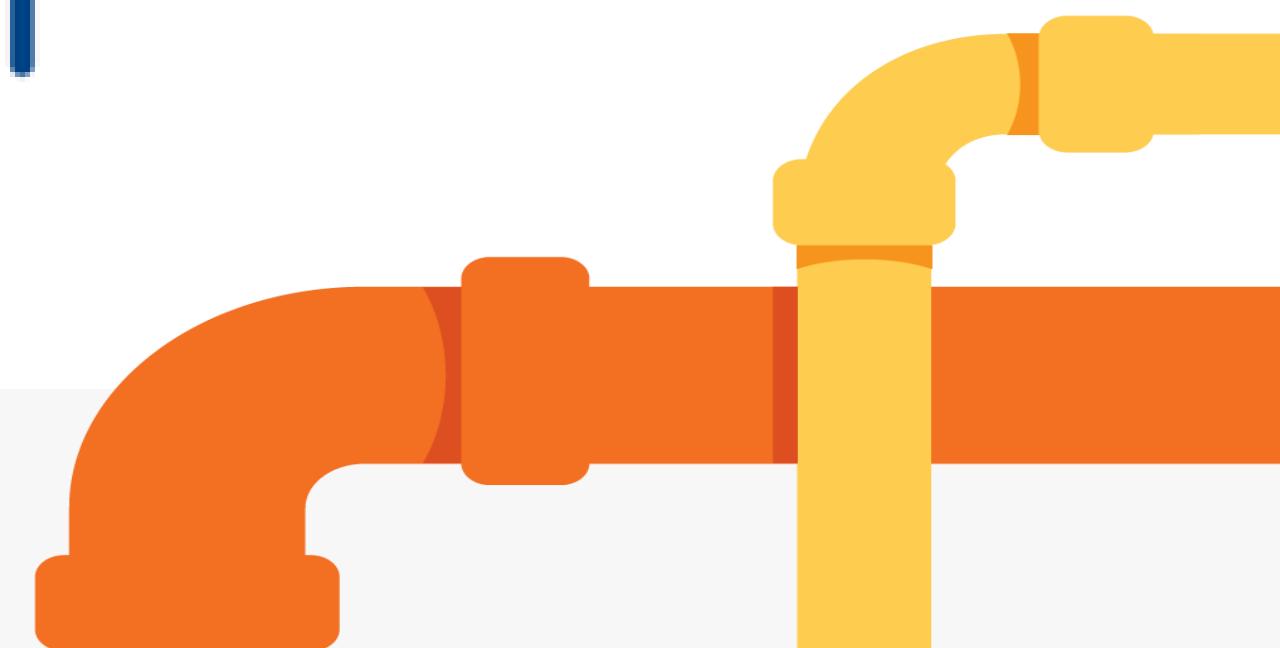

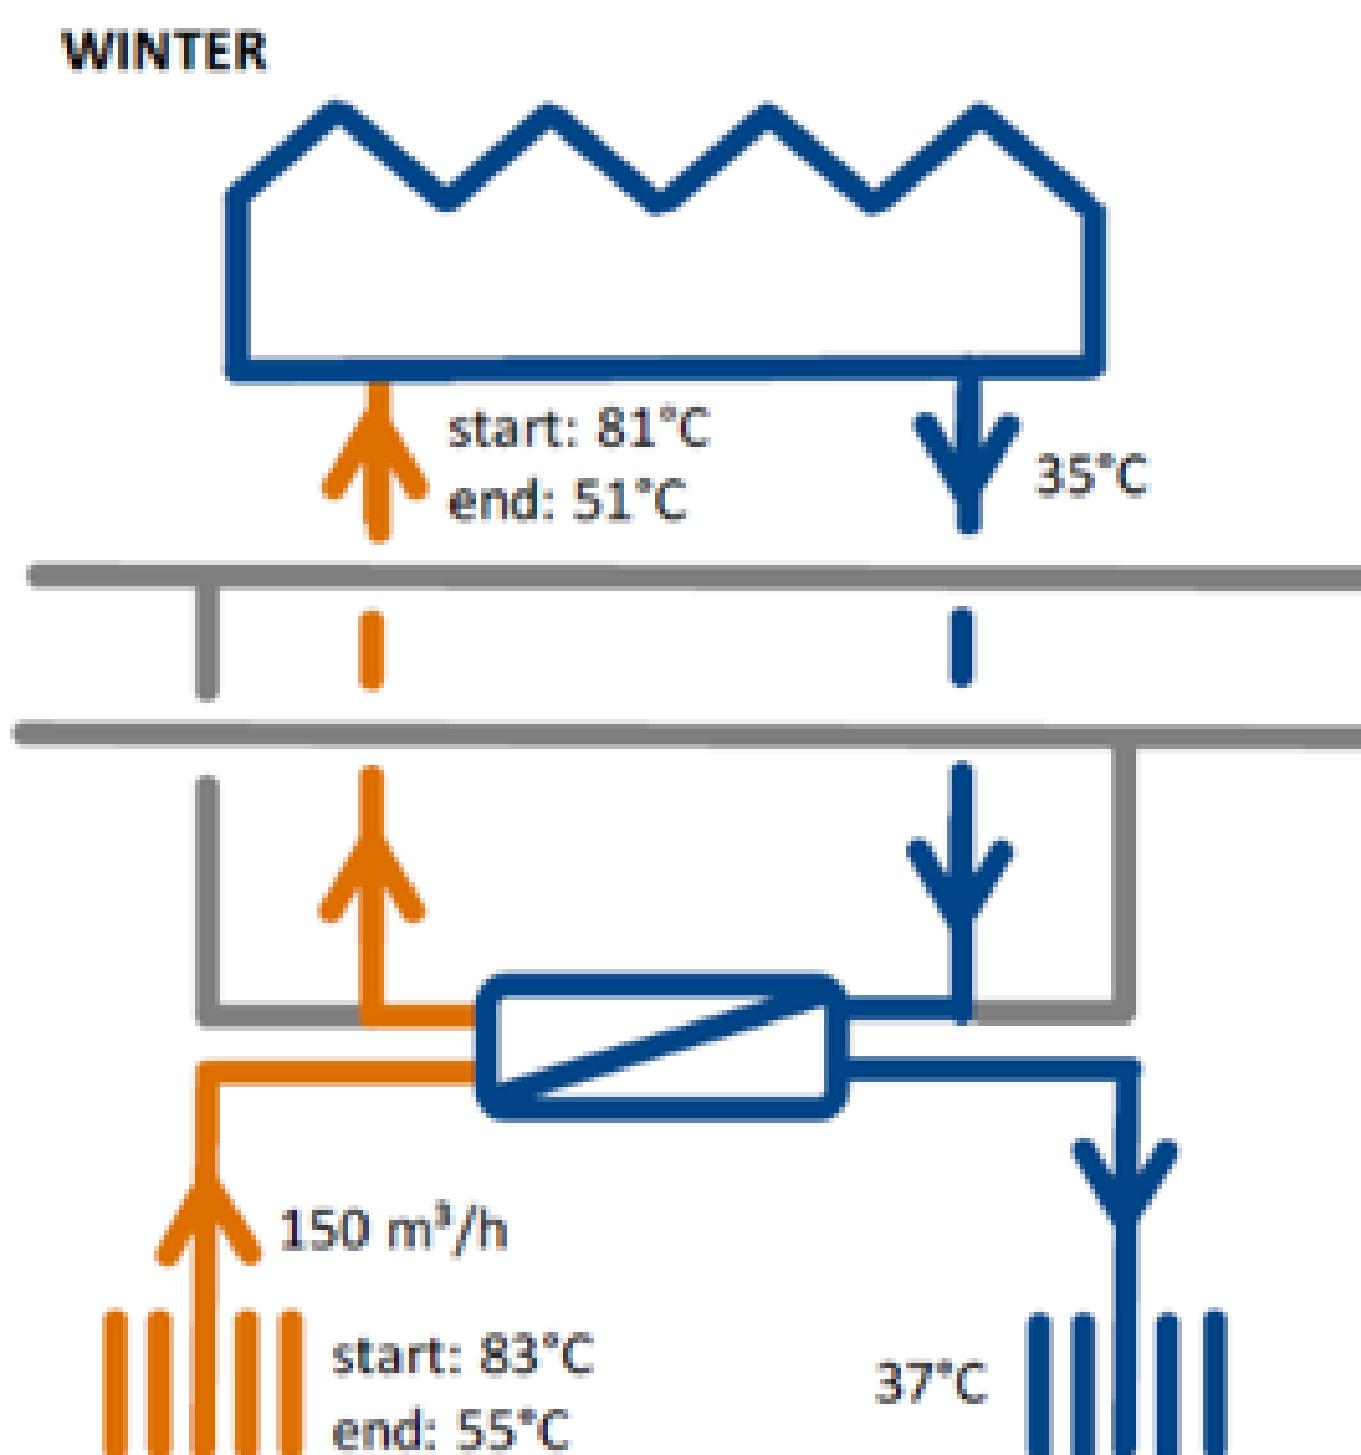

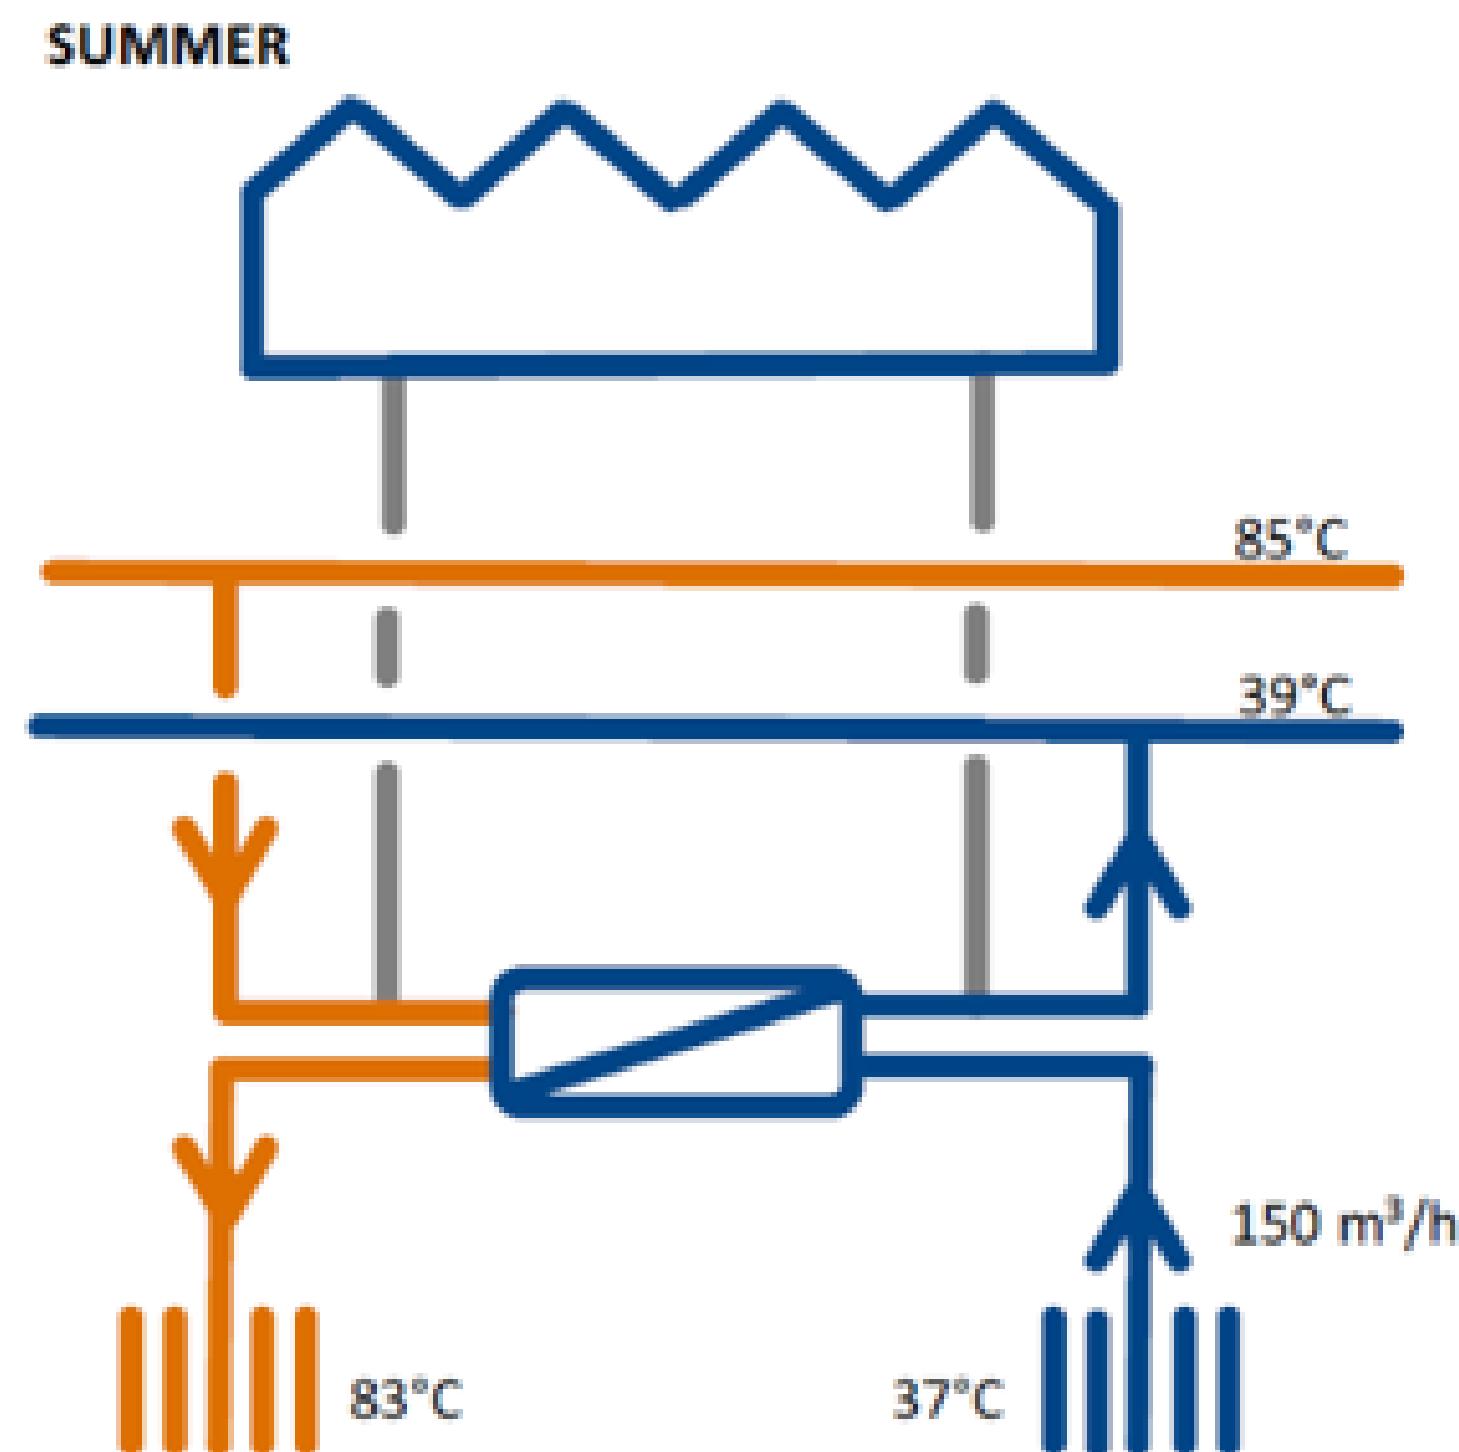

Figuur 2.1 | Overzichtskaart met daarop aangegeven de locaties van de bronnen en de monitoringsput, geplaatst op de strook land tussen de kas en de Medemblickervaart.

## Hoe werkt HTO?

Zon-PV

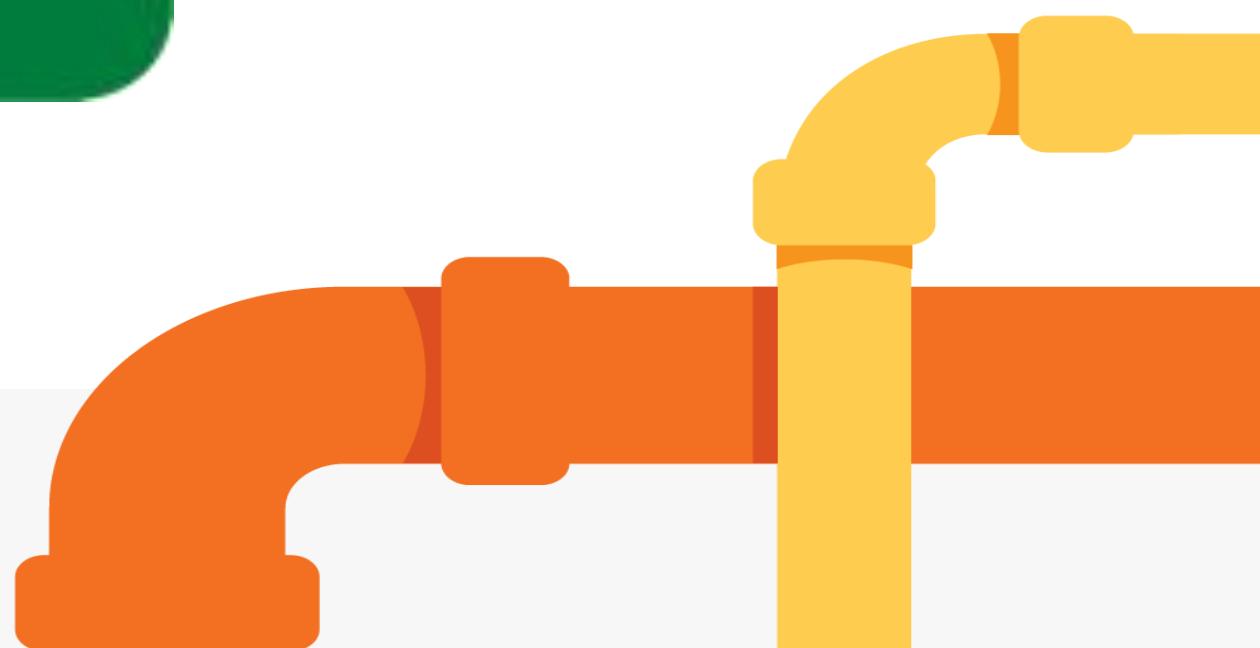

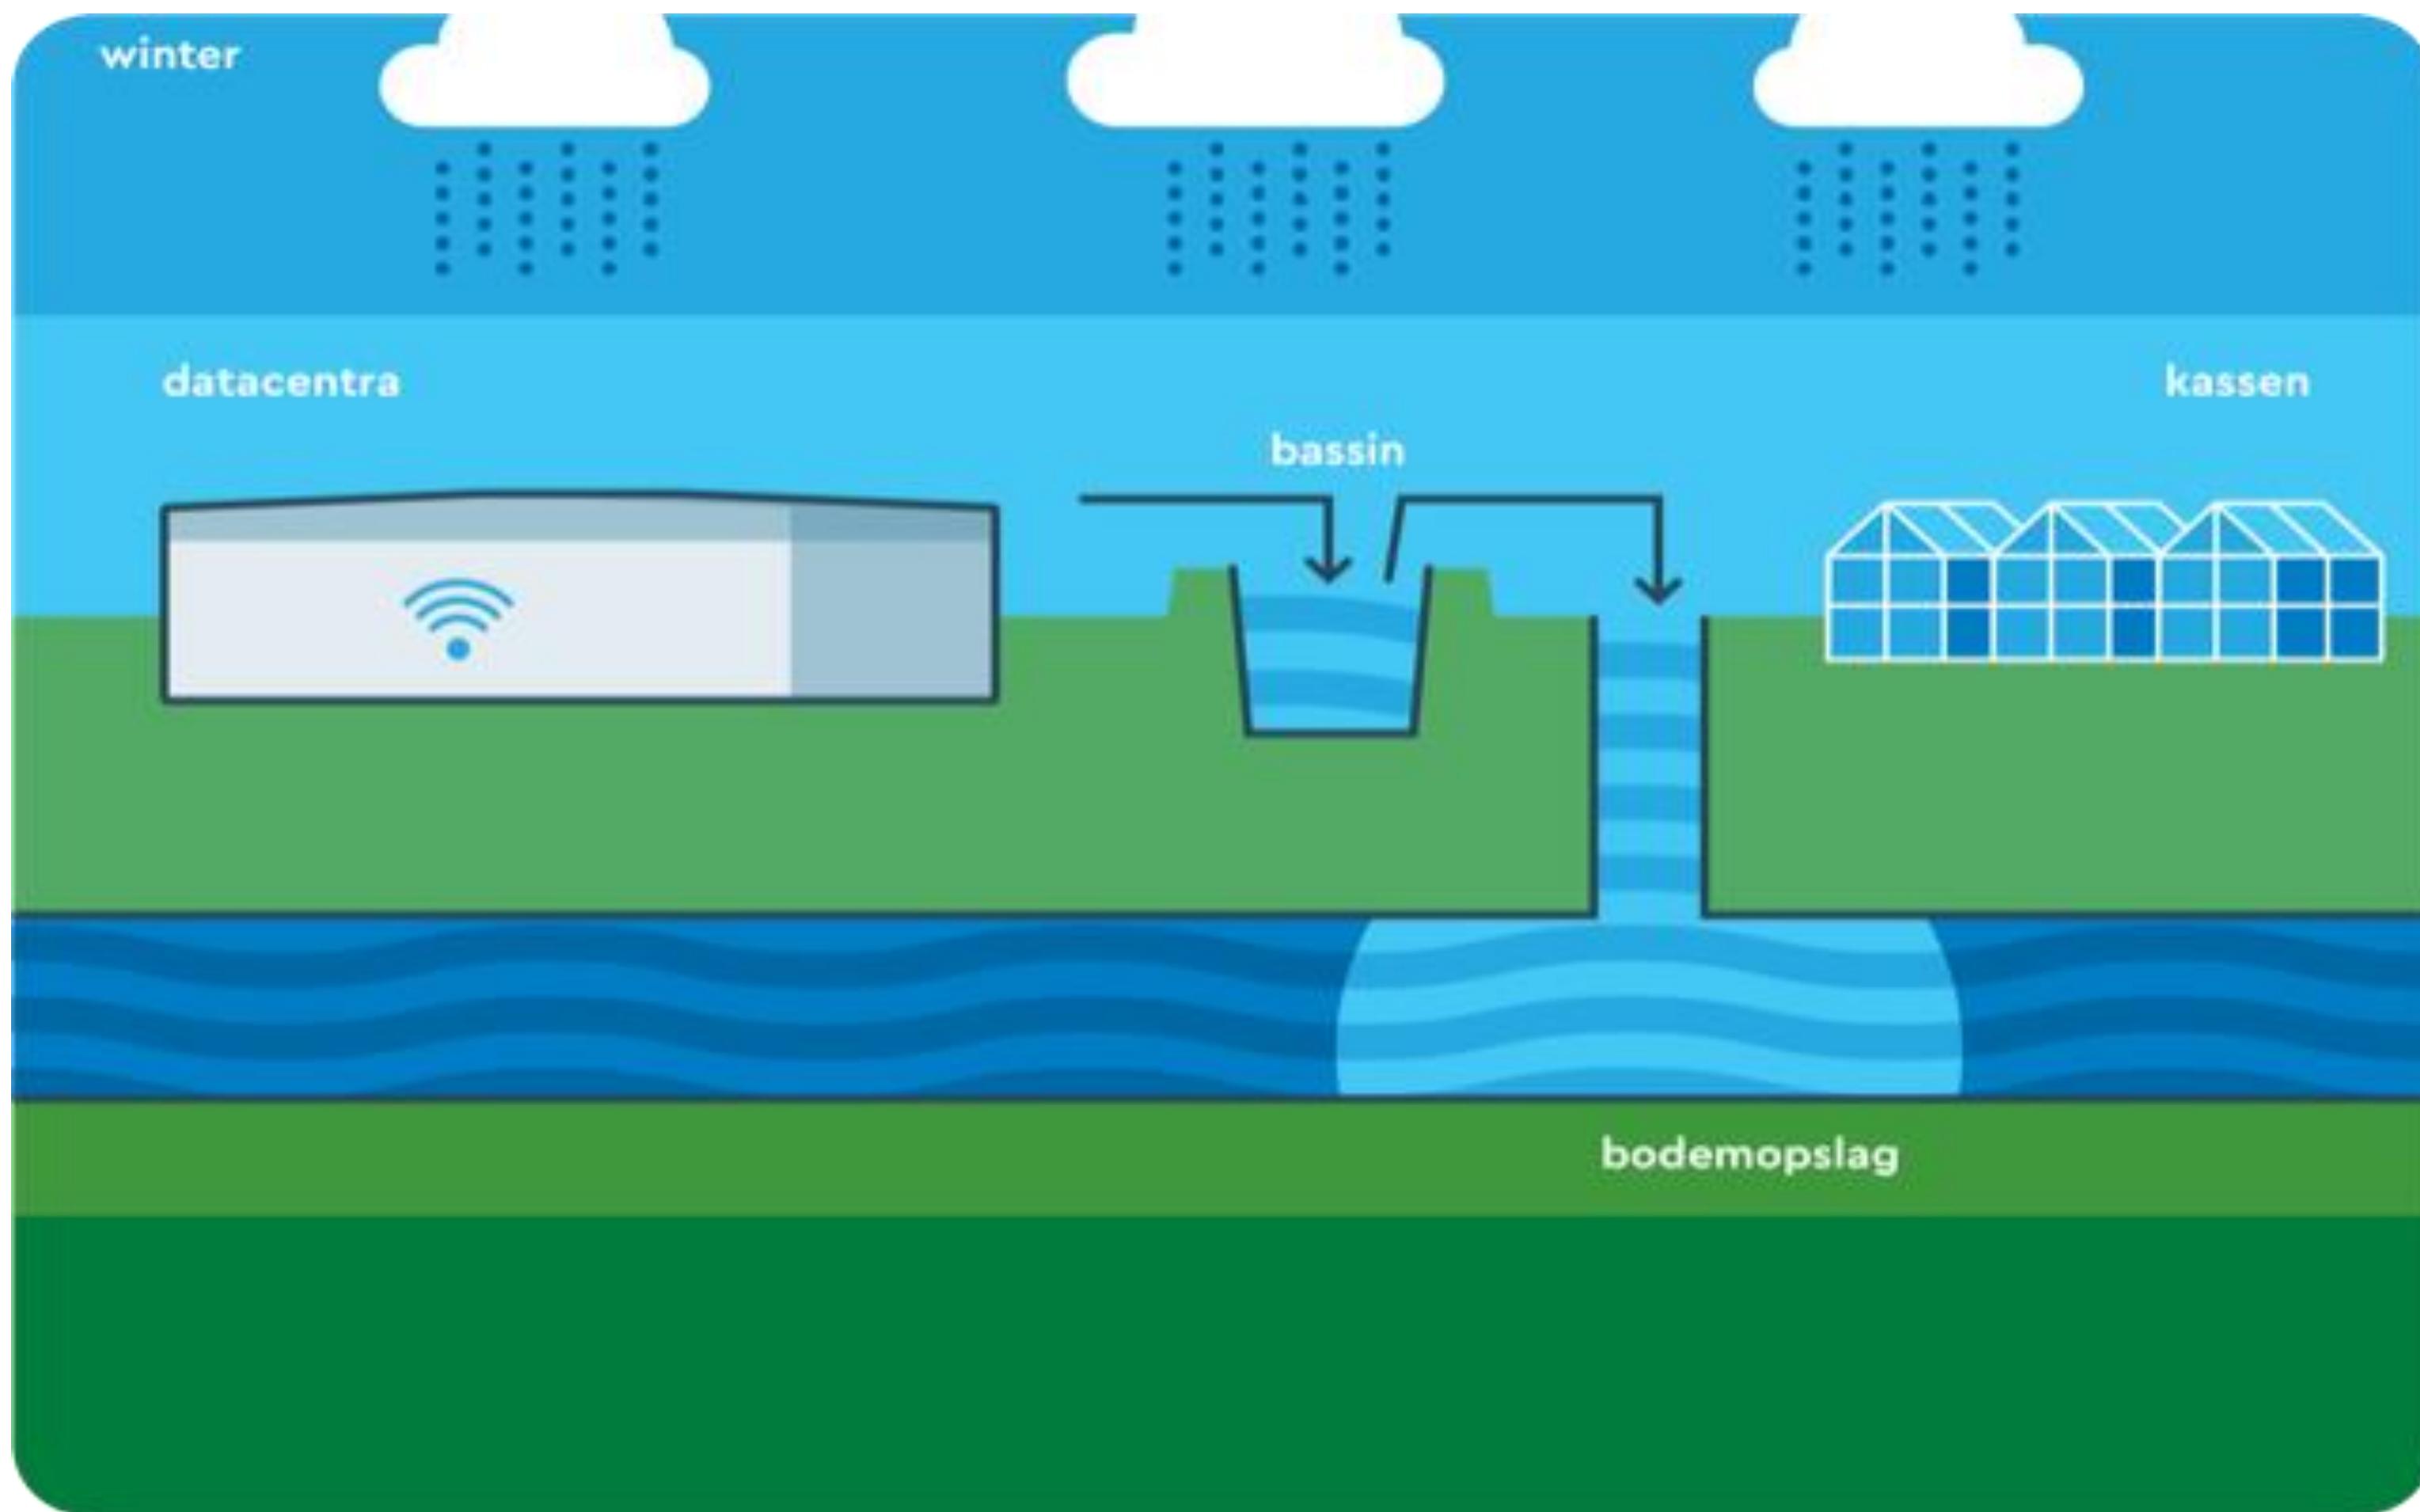

# Zon-PV & Biomassacentrale

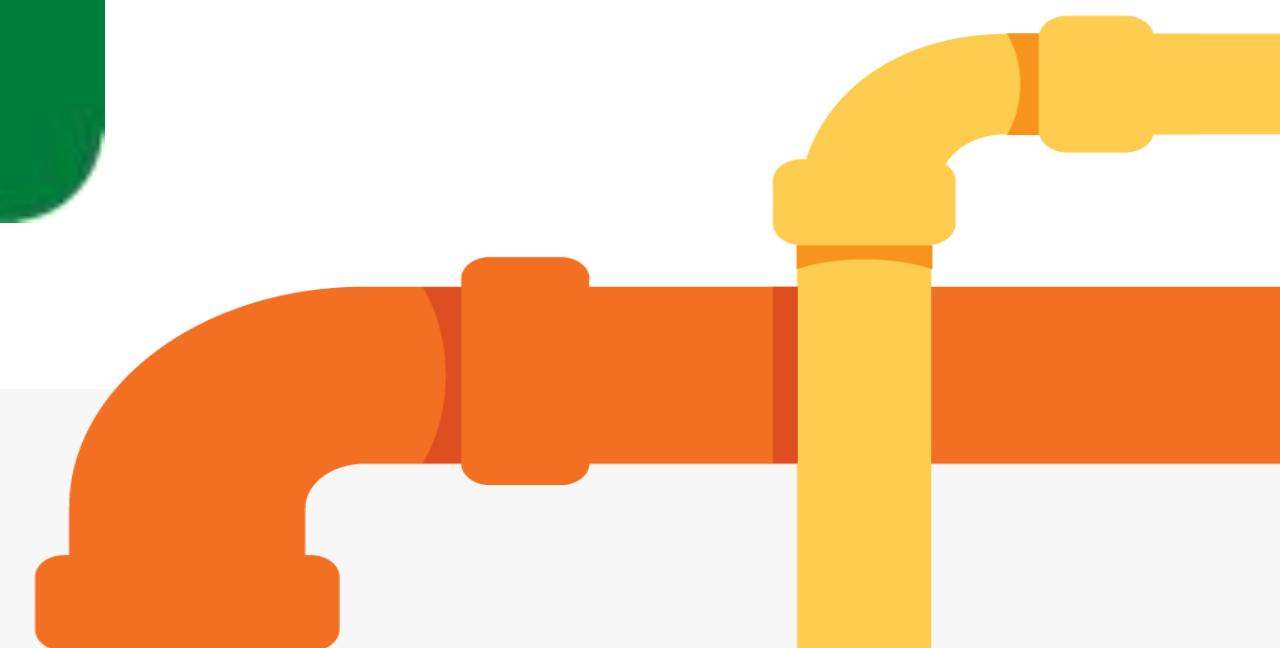

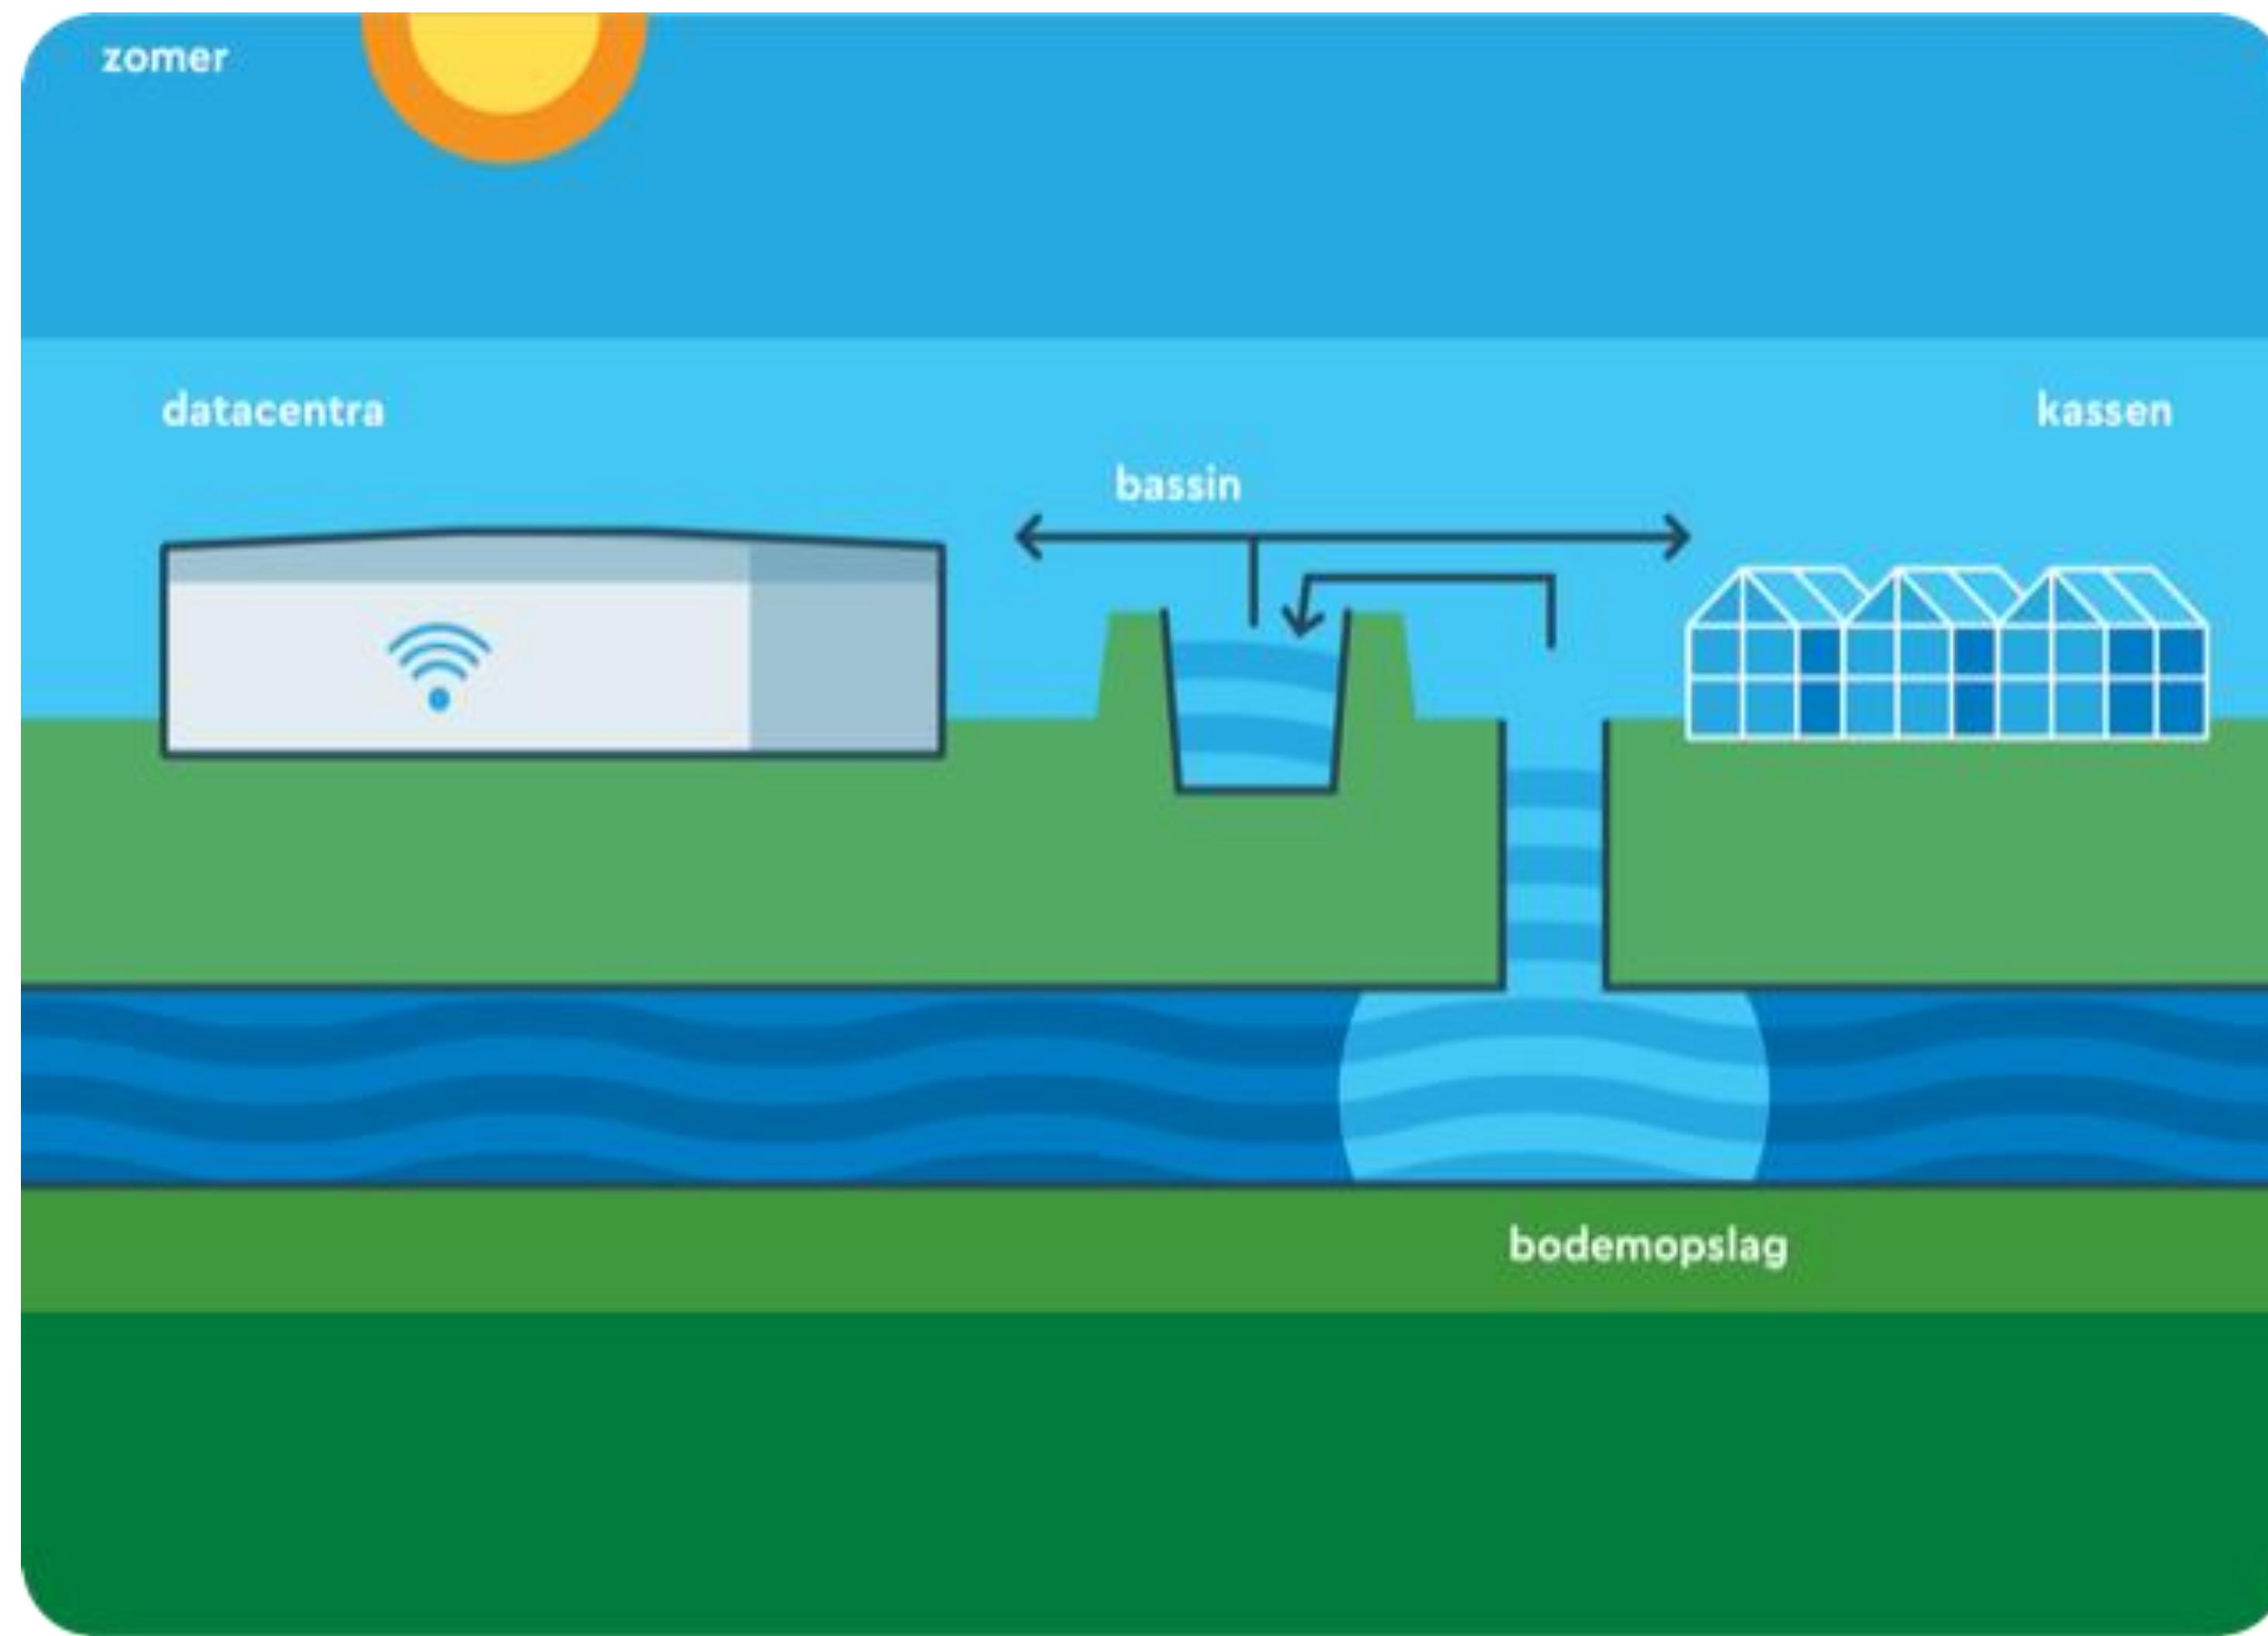

# Waterbank Agriport

- Hemelwaterberging
- Regenwater van daken van tuinders en datacenters wordt opgevangen in waterbank
- In perioden van droogte wordt water gebruikt voor irrigatie (tuinders) of als koelwater (datacenters)

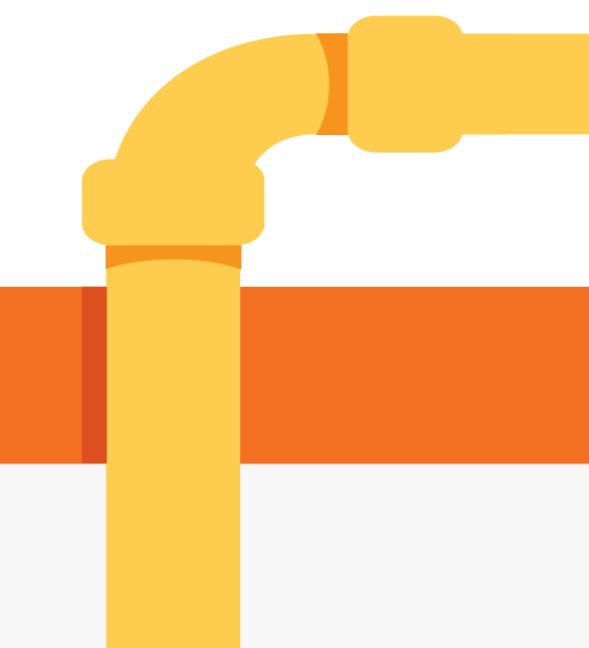

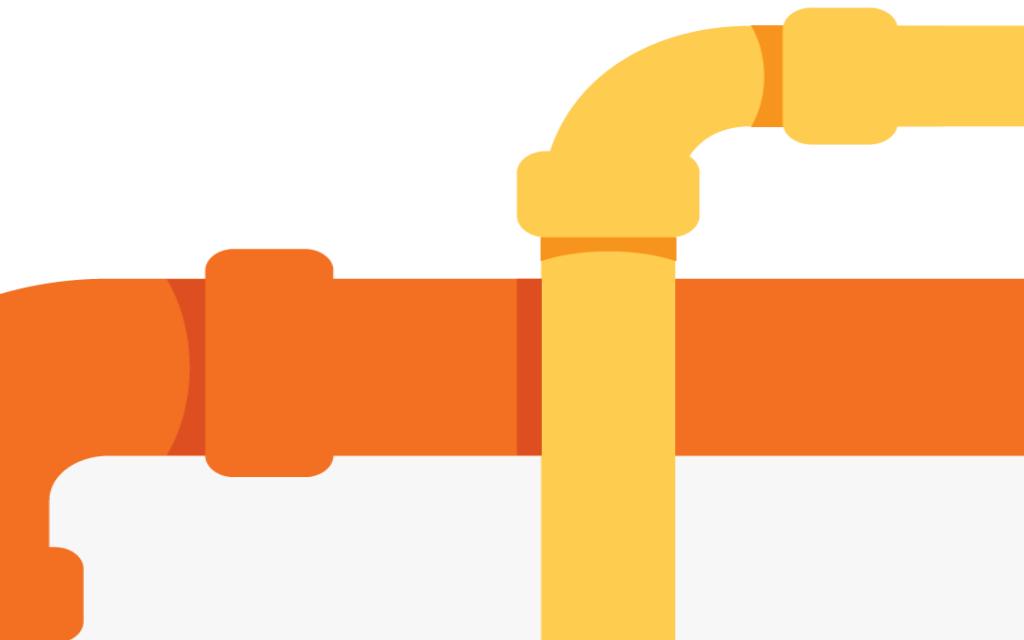

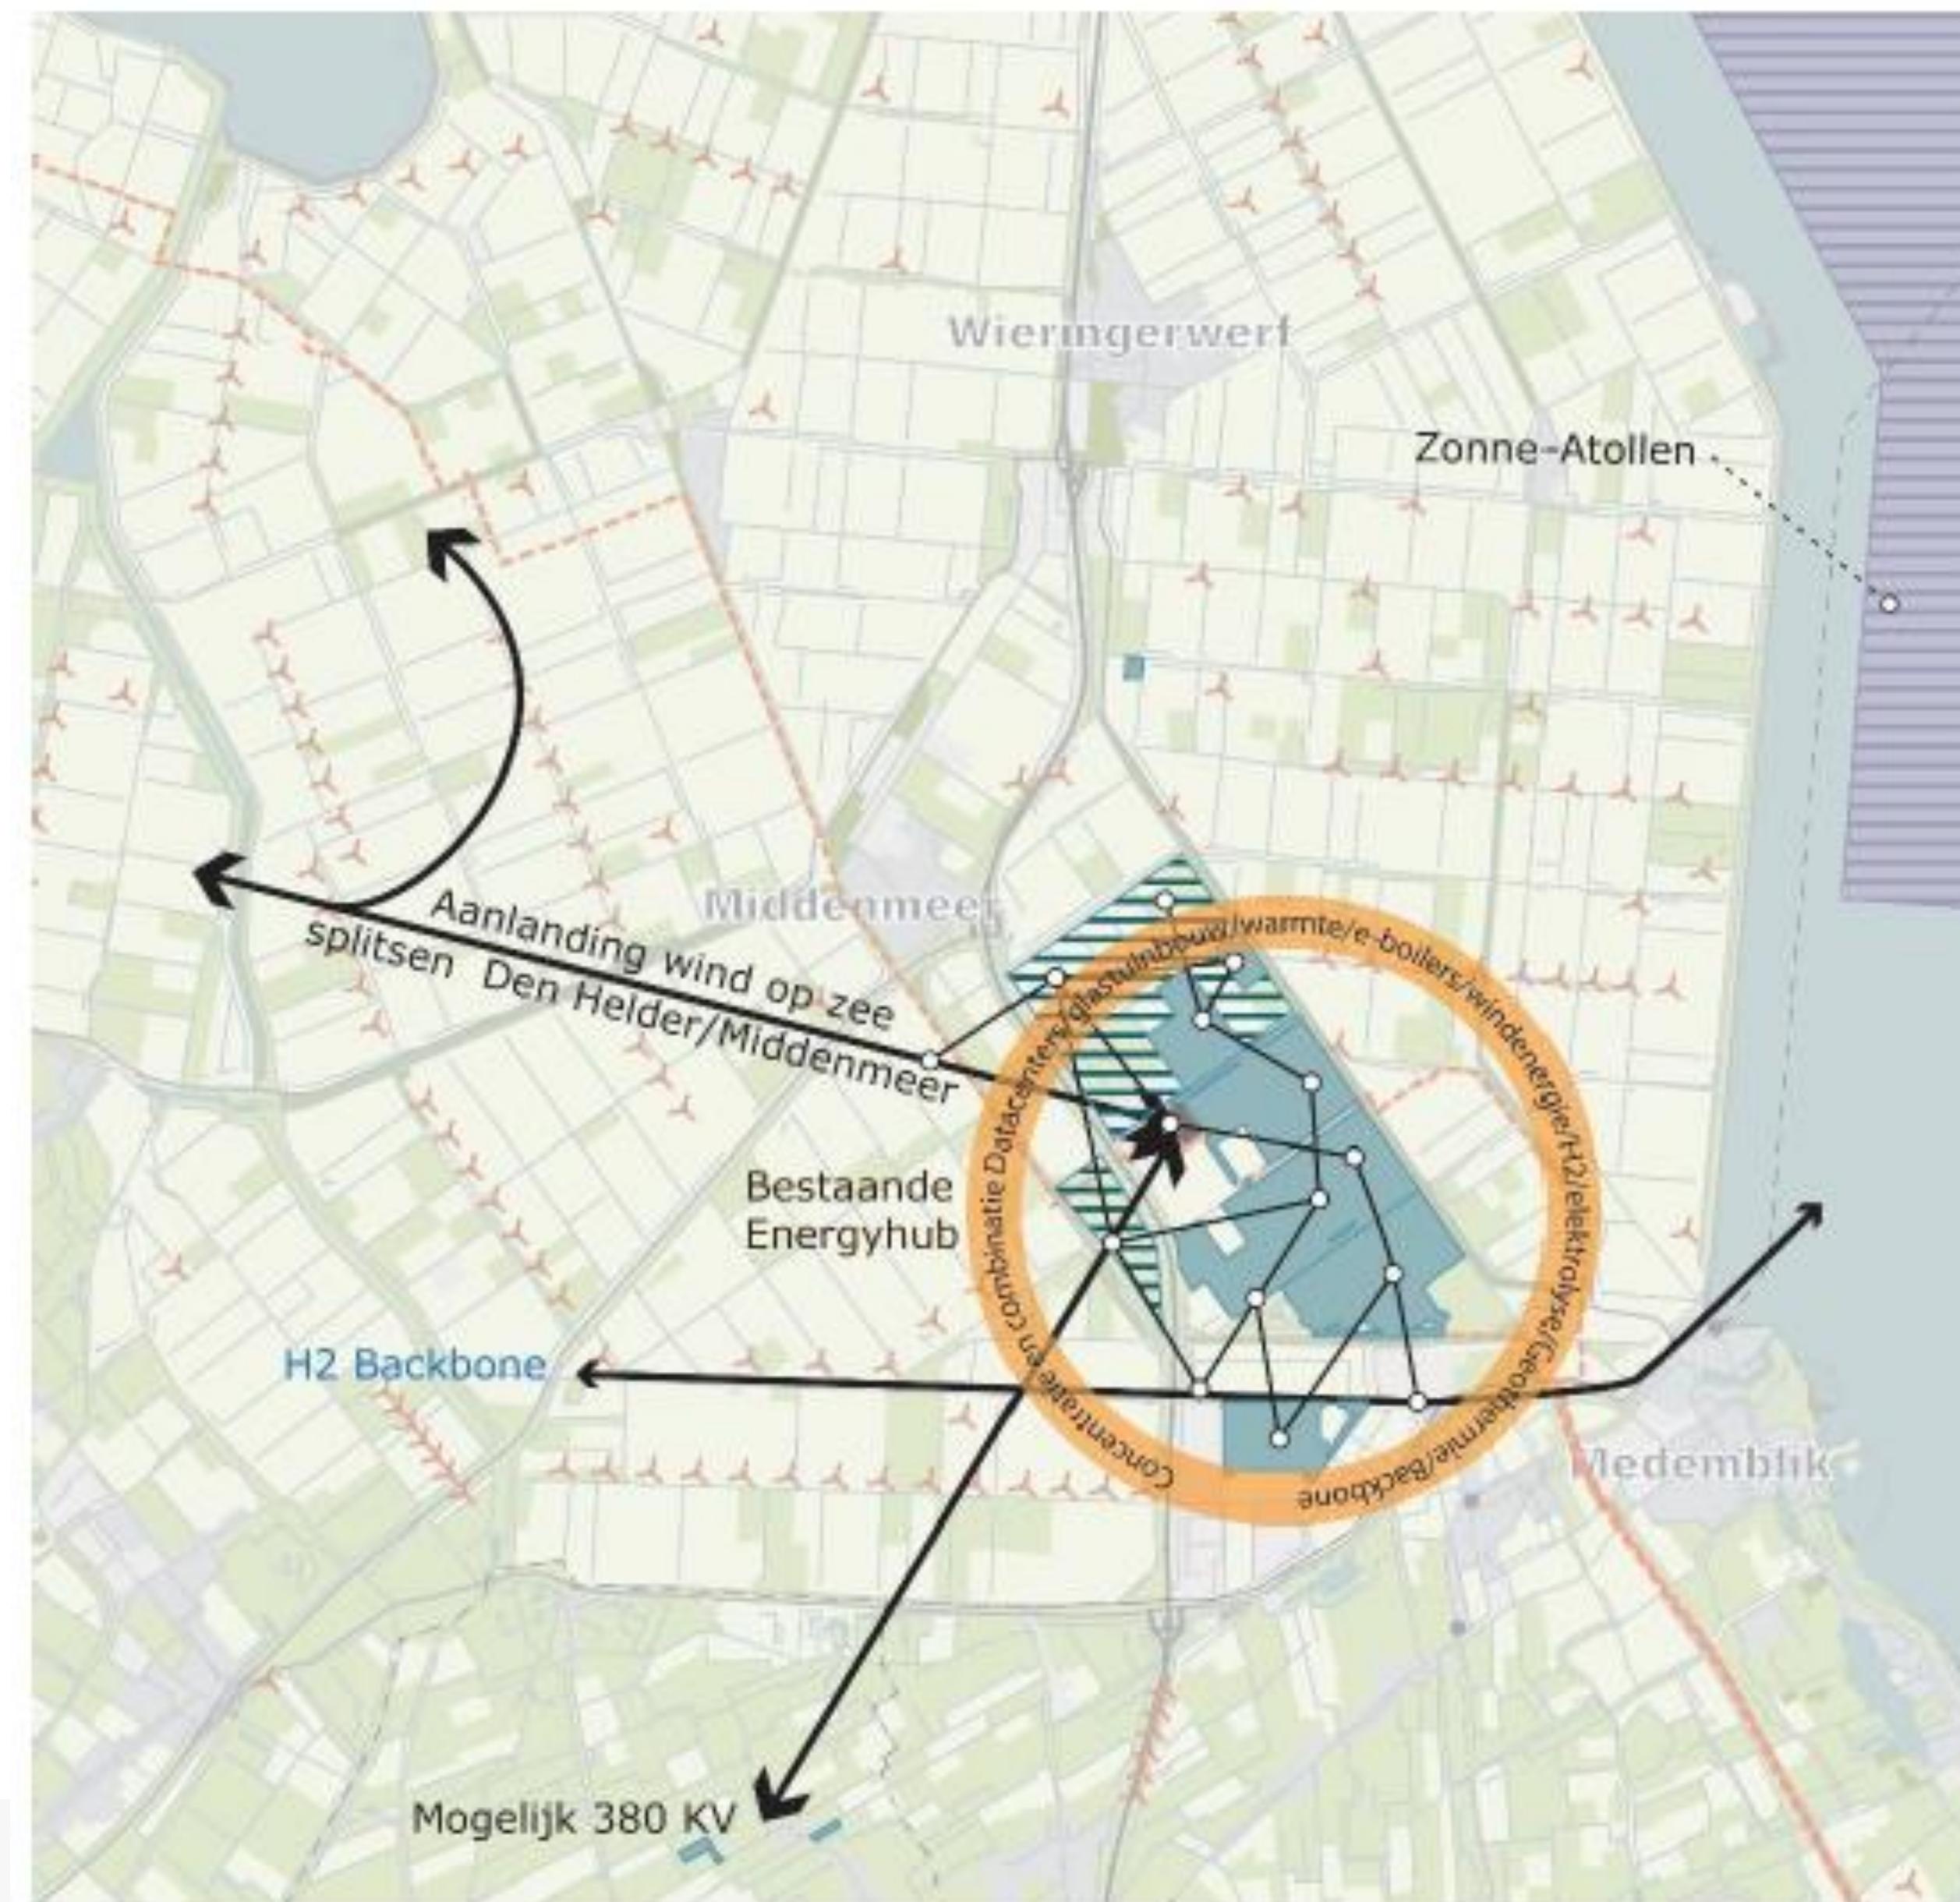

# Nederlandse Industrie

ecw  energy

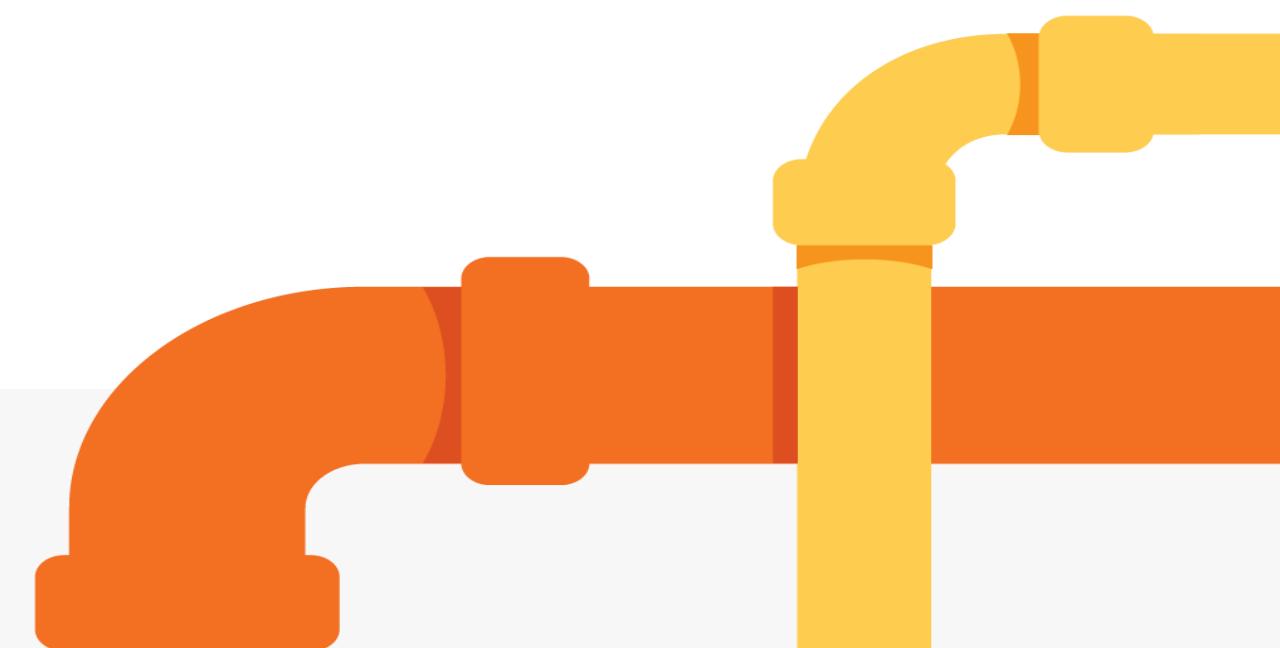

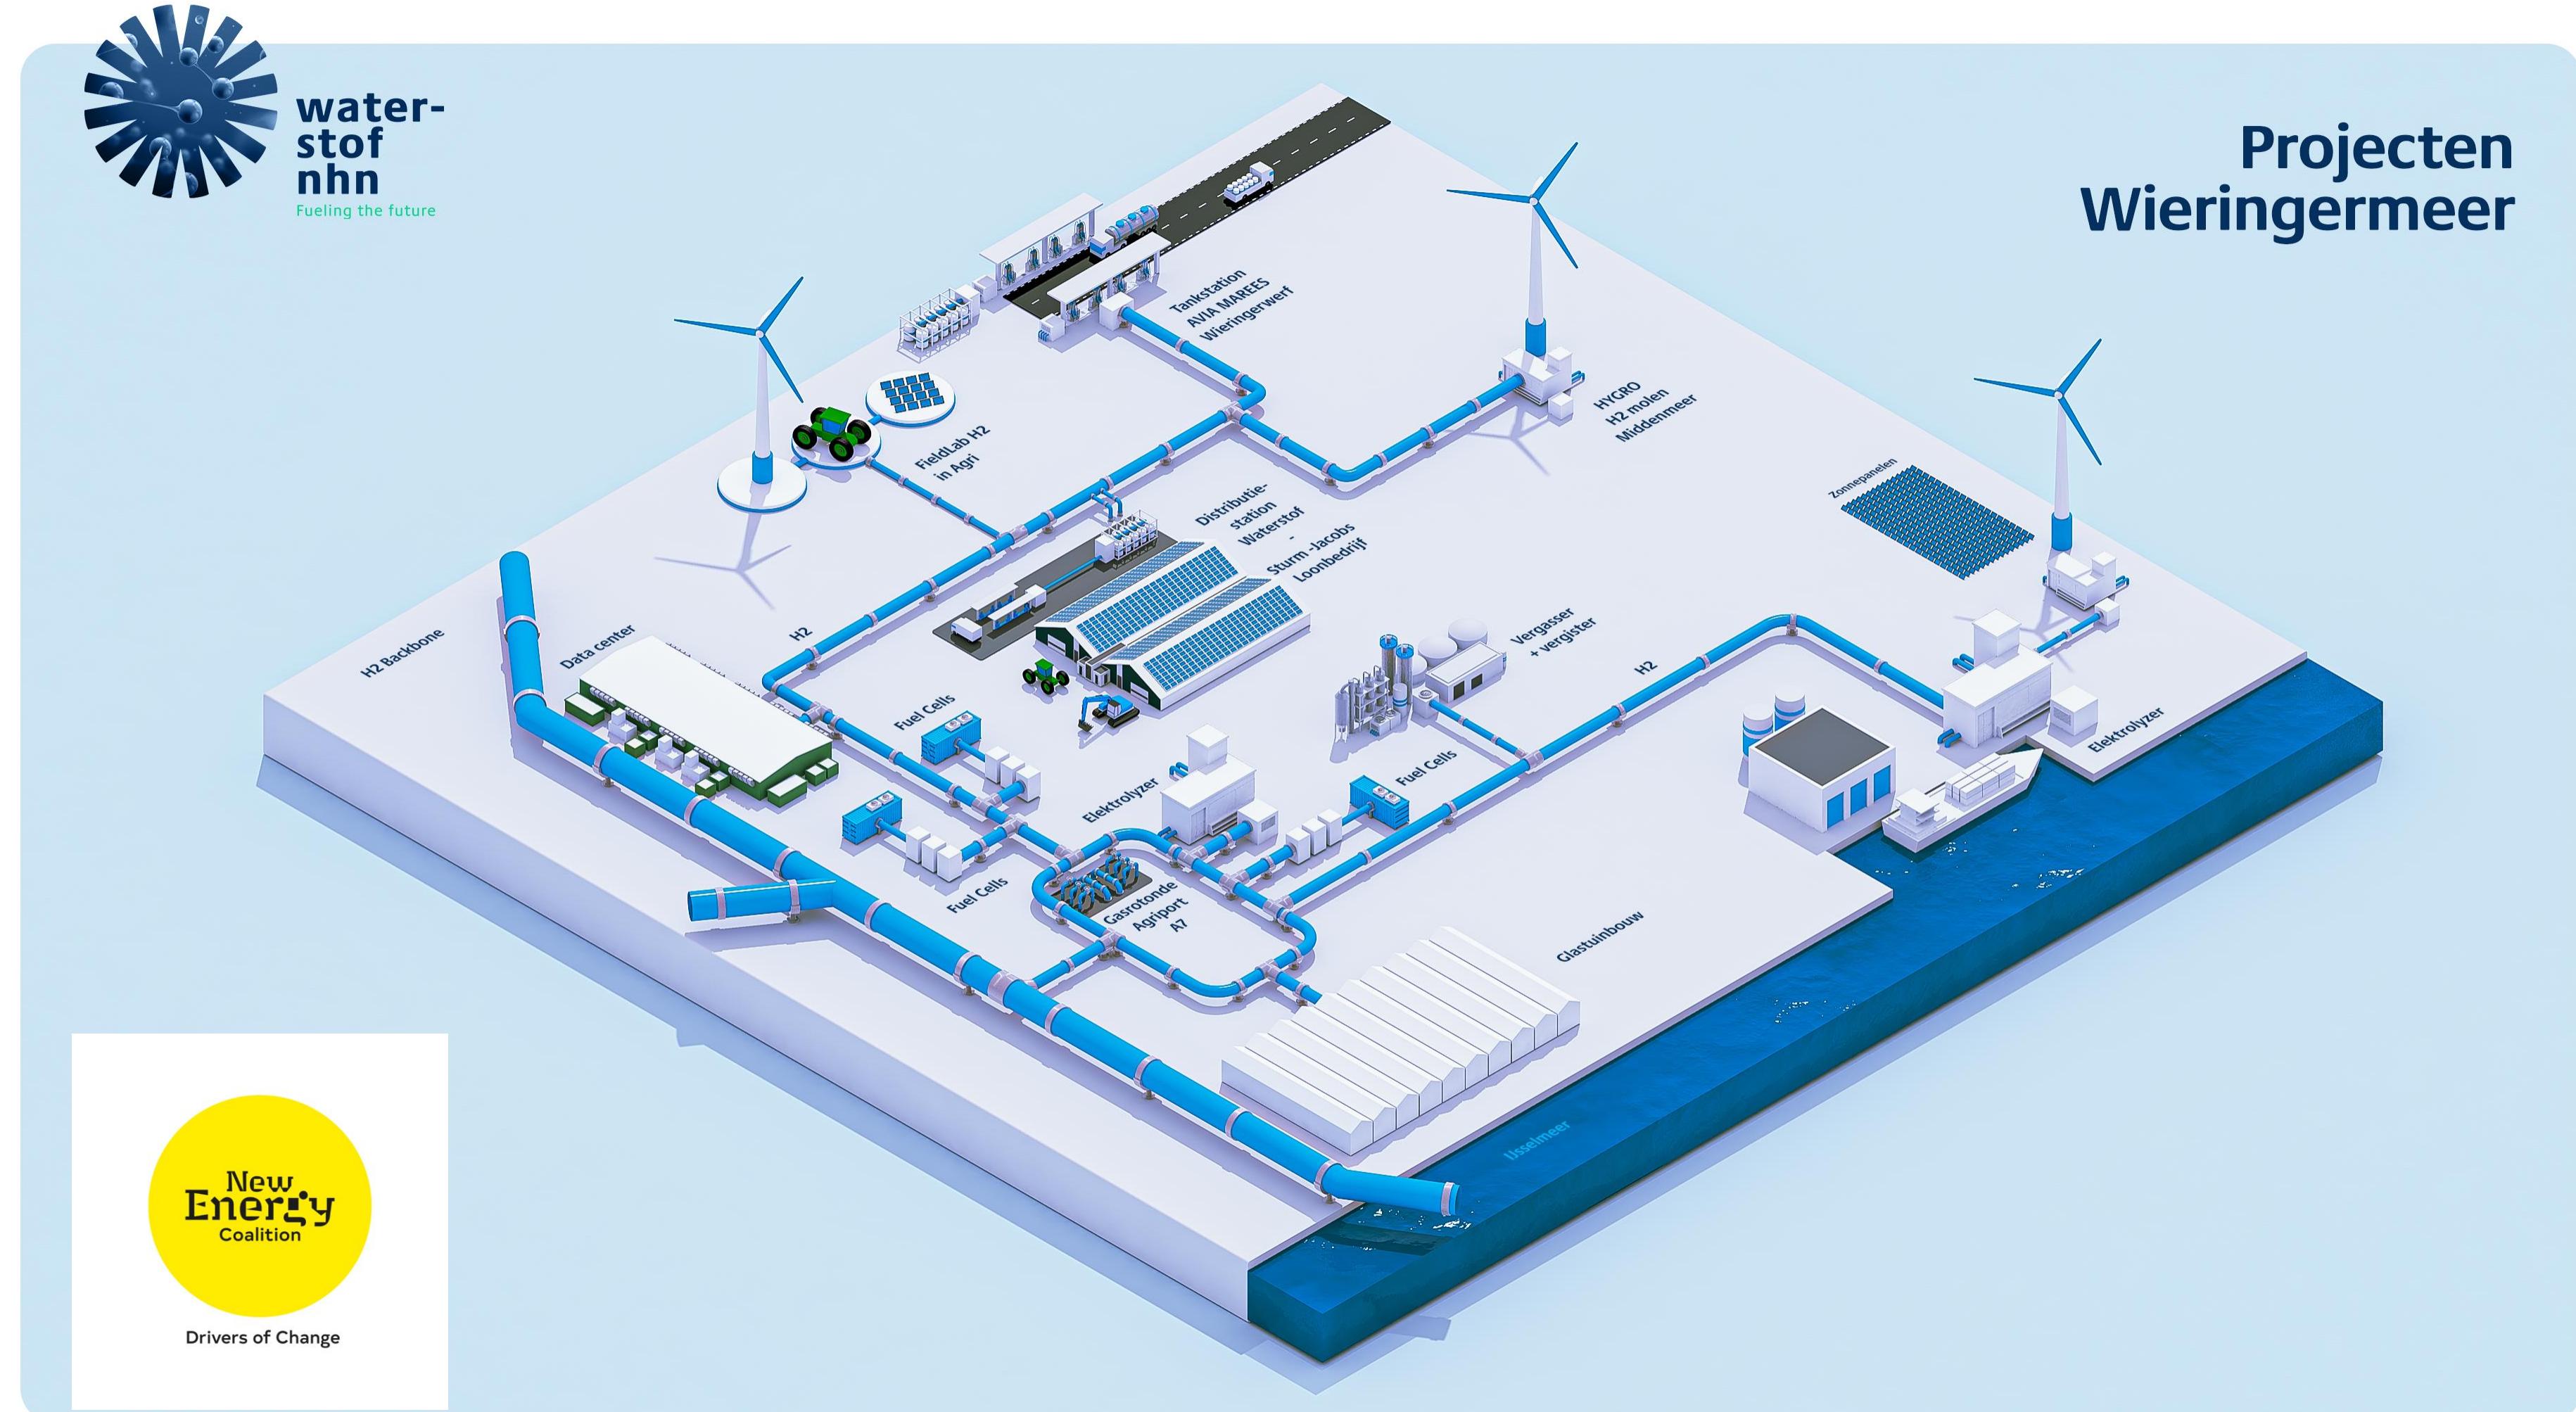

# Nederlandse Industrie

Figuur 3.4: Overzicht ontwikkelingen Middenmeer.

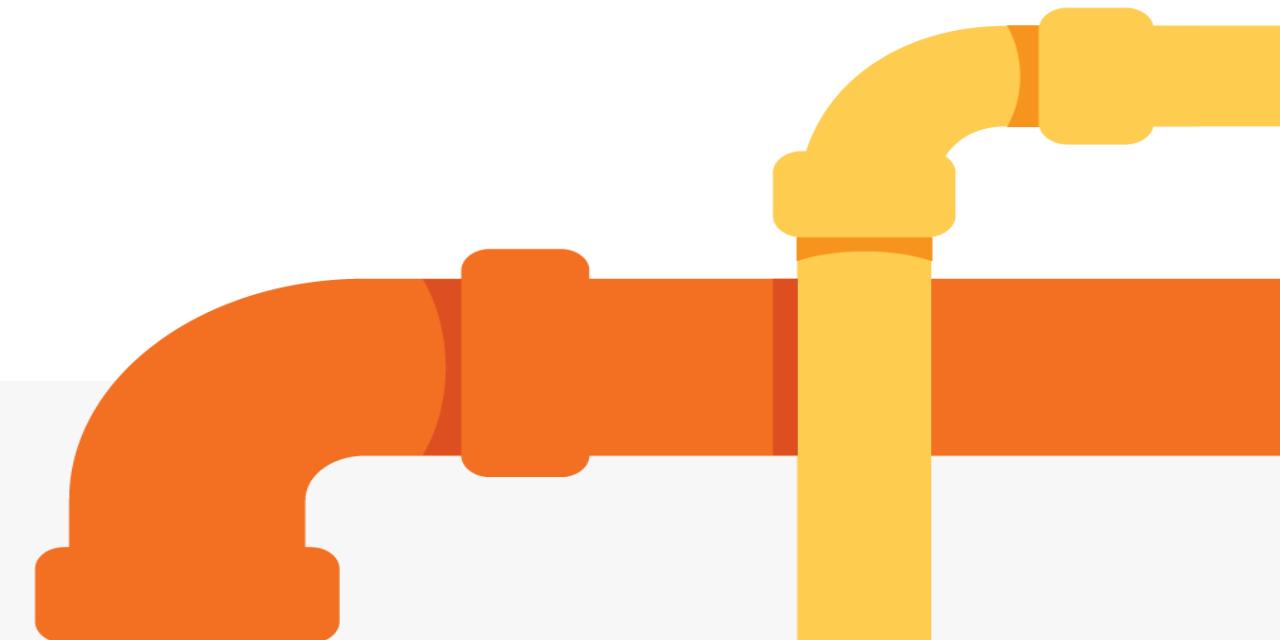

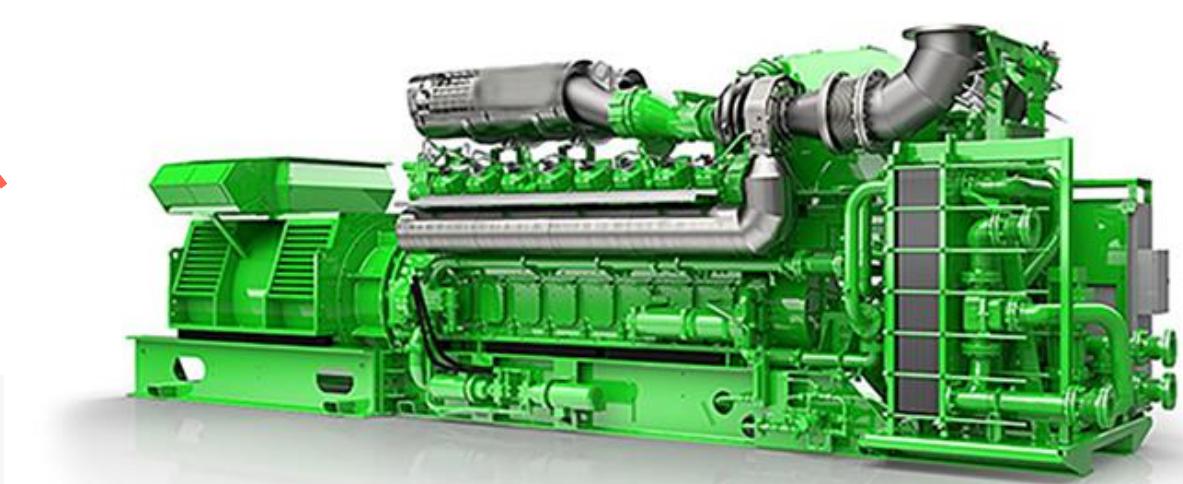

# Ontwikkelingen –synergie toekomst?

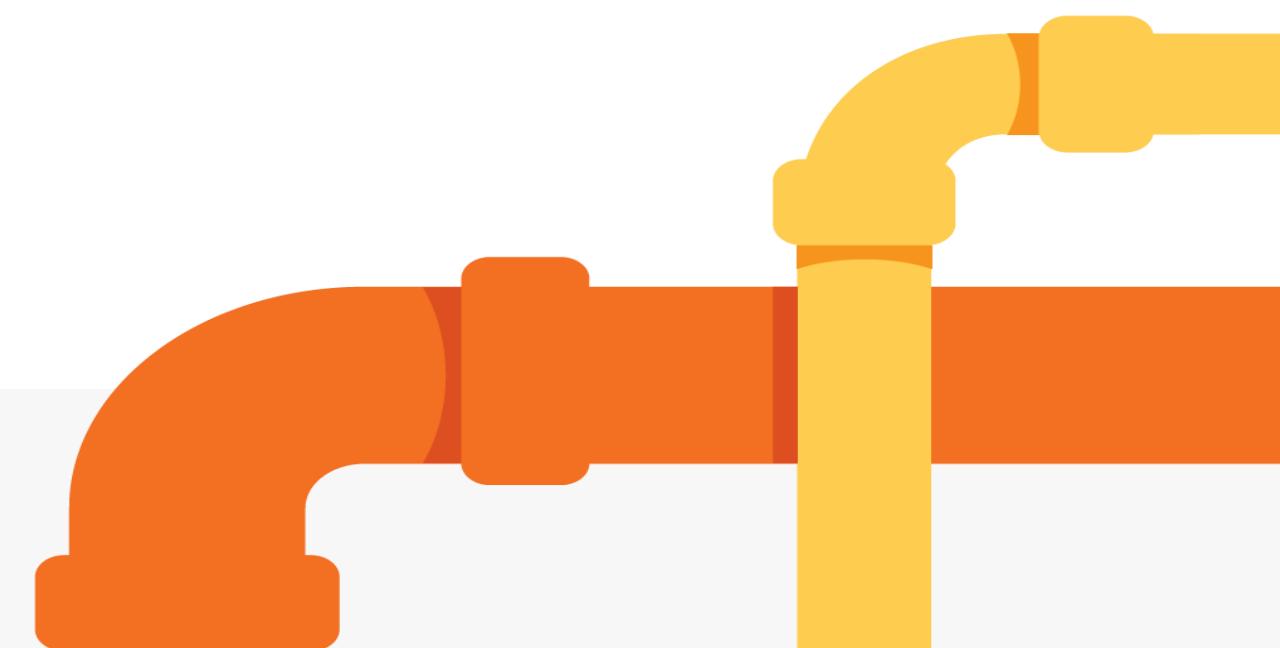

Back-up as a service

# Stelling

*Energyhubs bestaan uit energetisch  
complementaire bedrijven*

# Stelling

*Energy hubs moeten verduurzaming én economische ontwikkeling faciliteren van de industrie, dus moeten qua infrastructuur altijd anticiperen op toekomstige groei (en dus bewust over gedimensioneerd worden).*
